DC Water

Cost of Service Study

Final Report / February 25, 2022

February 25, 2022

Syed Khalil Director of Rates and Revenue DC Water 1385 Canal St., SE Washington, DC 20003

Subject: FY 2023-2024 Cost of Service Study Report

Dear Mr. Khalil,

Raftelis Financial Consultants, Inc. (Raftelis) is pleased to provide this Cost of Service Study (COS Study) Report for DC Water. Over the past several months, we have worked closely with DC Water completing this engagement. We would like to take this opportunity to thank you and your staff for the efforts and participation you put forth during the Study.

The major tasks of this COS Study included the following:

- Revenue Sufficiency Model (Model) Raftelis conducted a revenue sufficiency analysis to independently
 forecast operating and capital costs along with units of service for fiscal year (FY) 2023 and FY 2024; these
 years served as the test years. We compared our forecasted revenue to the Financial Planning Model
 developed by DC Water staff to identify any revenue shortfalls for the test years.
- Cost of Service / Rate Equity Analysis Raftelis reviewed and updated the cost of service allocation factors to ensure that proposed rates are equitable and that no cross subsidies exist between the various water and wastewater customer classes.

The Report summarizes the key findings and recommendations related to the financial plan and the proposed cost of service-based rates for FY 2023-2024.

It has been a pleasure working with you, and we thank you and DC Water staff for the support provided during the course of this study.

Sincerely,

Jon Davis Executive Vice President

227 W. Trade Street, Suite 1400 Charlotte, NC 28202 www.raftelis.com

1. Executive Summary

1.1. Background of the Study

DC Water engaged Raftelis to perform a Cost of Service Study (COS Study). To meet the needs of DC Water's Task Order objectives, Raftelis prepared the following deliverables:

- Revenue Sufficiency Model (Model) Raftelis conducted a revenue sufficiency analysis to independently forecast operating and capital costs along with units of service for fiscal year (FY) 2023 and FY 2024; these years served as the test years. We compared our forecasted revenue to the Financial Planning Model developed by DC Water staff to identify any revenue shortfalls for the test years.
- Cost of Service / Rate Equity Analysis Raftelis reviewed and updated the cost of service allocation factors to ensure that proposed rates are equitable and that no cross subsidies exist between the various water and wastewater customer classes.

A summary of the methodology and findings from the Revenue Sufficiency and COS Study is included in this Executive Summary.

1.2. Revenue Sufficiency Model

There are three important forecasts in the revenue sufficiency analysis: operating expenditures, capital expenditures, and units of service. These three schedules project how much revenue DC Water will generate.

Units of service include number of customer accounts, billed water consumption, and equivalent residential units (ERUs). To forecast units of service in the most accurate manner, Raftelis reviewed billed water, customer accounts, and consumption data from FY 2020 and FY 2021.

Since FY 2014, billable water flows have decreased by an average annual rate of approximately 1.5%. This has occurred even though DC Water's customer base has increased slightly over the same period. The trend in declining consumption is likely related to a combination of the expanded use of low-flow fixtures and a broader awareness of resource conservation. This trend is consistent with the per capita declines in consumption that Raftelis has seen in other utilities with similar demographics and service area characteristics. The trend of declining consumption accelerated in FY 2020-21 especially for commercial customers, presumably due to the impacts of the COVID-19 pandemic.

Raftelis has assumed that the count of Equivalent Residential Units (ERUs), which are used to calculate revenue from the Clean River's Impervious Area Charge (CRIAC), are consistent with DC Water's most recent update to its impervious area database.

Based on projected consumption, accounts, and ERUs in FY 2020-2021, Raftelis' calculated revenue from operations was consistent with DC Water's Financial Plan. In the aggregate, the variance in revenue when compared to the Financial Plan for FY 2023-2024 was less than 0.5% for both test years.

Our analysis found that DC Water has consistently been able to control operating expenditures at or below budgeted levels. Therefore, it was determined that budgeted operating expenditures provided a prudently conservative forecast for our sufficiency analysis. Capital expenditures consisted mainly of debt service and coverage requirements.

The revenue sufficiency forecasts for FY 2023 and FY 2024 showed revenue lower than DC Water's Financial Plan by \$2,633,133 and \$3,517,931, respectively. A discrepancy in user revenue data is expected, as Raftelis calculates revenue using raw consumption data, which usually diverges from the Financial Plan estimate. Furthermore, Raftelis used slightly different calculation methods for estimating future debt issuances in FY 2022, which accounts for the small delta for total debt service in FY 2022. A comparison of total revenues and expenses is provided in Table E-1.

	DC Water Financial Plan		
	(2023)	Raftelis Model (2023)	Delta

Table E-1: Comparison of Projected Revenue and Expenses

Raftelis' model results are predicated on several assumptions. A more thorough discussion of these assumptions can be found in Section 3.3 of this report.

1.3. Cost of Service and Rate Equity

Raftelis was asked if the proposed rates represented the true cost of service. To assure that there was no subsidization within the retail customer base, we developed test year revenue requirements and allocated them to existing rate

structure components using reasonable allocation factors. Dividing the allocated revenue requirement by the units of service yields the cost of service-based rates for all categories but water. Raftelis used a more detailed cost of service analysis, discussed further in the body of the report, to calculate DC Water's class-based, tiered water rates. Table E-2 presents the allocation of test year revenue requirements to the water volume charge, metering fee, wastewater volume charge, and the CRIAC.

	FY 2023	Water	Meter	Wastewater	CRIAC
Retail Revenue Requirements	\$607,502,497	\$162,396,157	\$24,088,233	\$329,633,511	\$91,384,596

Requirements Percent of Retail Revenue Requirements Units of	\$637,139,846	\$164,159,626 25.8%	\$24,092,187 3.8%	\$338,754,805 53.2%	\$110,133,229 17.3%

Table E- 2: Cost of Service Unit Costs

1. Note that final rates are rounded up only once calculated.

	FY 2022	2022 FY 2023 FY 2024 FY		FY 2	2023	FY 2024	
	(Existing)	(Proposed)	posed) (Proposed)	\$ Difference	% Difference	\$ Difference	% Difference
Water Volumetric Residential – Tier 1	\$3.63	\$4.28	\$4.38	\$0.65	17.9%	\$0.10	2.3%
Water Volumetric Residential – Tier 2	\$4.74	\$5.58	\$5.70	\$0.84	17.7%	\$0.12	2.2%
Water Volumetric – Multi-family	\$4.15	\$4.90	\$5.00	\$0.75	18.1%	\$0.10	2.0%
Water Volumetric – Non-Residential	\$4.91	\$5.78	\$5.89	\$0.87	17.7%	\$0.11	1.9%
Sewer Volumetric	\$10.64	\$11.26	\$11.70	\$0.62	5.8%	\$0.44	3.9%
Metering Fee	\$7.75	\$7.75	\$7.75	\$ -	0%	\$ -	0%
Clean Rivers IAC	\$18.40	\$18.14	\$21.86	\$(0.26)	-1.4%	\$3.72	20.5%
WSRF	\$6.30	\$6.30	\$6.30	\$ -	0%	\$ -	0%
WAD Rate	\$3.03	\$3.21	\$3.30	\$0.18	5.9%	\$0.09	2.8%
Groundwater Fee	\$2.83 ¹	\$3.42	\$3.50	\$0.59	20.8%	\$0.08	2.3%

Table E- 3: Cost of Service Calculation and Proposed Rates

1. The Groundwater Fee currently in effect was originally calculated in 2018, so the 20.8% increase in the proposed fee for FY 2023 reflects increases in costs since 2018.

2. Introduction

DC Water engaged Raftelis to provide consulting services for a Revenue Sufficiency and Cost of Service Study (COS Study). The main purpose of the COS Study was to review DC Water's existing Financial Planning Model (Financial Plan) and its inputs and to calculate cost of service-based retail rates for DC Water's upcoming rate adoption period of FY 2023-FY 2024. The Study was designed to ensure that there were no cross-subsidies among the various water and wastewater retail customer classes.

Raftelis conducted a revenue sufficiency analysis to independently forecast operating and capital costs along with units of service for FY 2023 and FY 2024; these two years served as test years. Raftelis compared their independent financial forecast to the forecast in the Financial Plan, identifying any revenue discrepancies for the test years.

2.1. Deliverables

Raftelis prepared three deliverables for this Study:

- 1. Revenue sufficiency/cost of service model schedules;
- 2. A report to document our study processes, results, and recommendations; and
- 3. A presentation to summarize the results of the study for the Retail Rates Committee of the DC Water Board.

Deliverables were presented in draft form to DC Water staff for review and comment. This report, the second deliverable, gives an overview of the COS Study's most important findings, discussed in detail below.

3. Revenue Sufficiency Analysis

Raftelis' revenue sufficiency analysis was intended to provide an independent forecast of revenues and expenditures. Raftelis completed a revenue sufficiency model (Model) and compared the results of this model to the corresponding results in the Financial Plan.

3.1. Revenue Sufficiency Model

The Model compares the revenues generated from existing rates and charges against DC Water's costs, or revenue requirements. The Model includes an independent forecast of operating and capital costs along with an analysis of the billable units of service. The analysis assumes test years of FY 2023 and FY 2024.

3.1.1.OPERATING EXPENSES

DC Water's actual and projected operating expenses were incorporated into the Model based on information taken from DC Water's FY 2022 Budget, FY 2023 Proposed Budget, and FY 2024 Proposed Budget. Average total O&M cost increases from FY 2022-23 and FY 2023-24 are 4.27%. Although inflation (as measured by the Consumer Price Index) has been less than 4% over the past several years, the potential for future inflation in excess of 4% is realistic. Due to the commodity-intensive nature of the water and sewer industry, which demands significant amounts of treatment chemicals and electricity, DC Water should re-visit budget escalation estimates annually as part of its financial planning process.

Based on these escalation criteria, Raftelis is projecting overall O&M costs of \$381,961,932 and \$398,705,362, respectively, for test years FY 2023 and FY 2024. These figures do not include expenses related to the payment in lieu of taxes (PILOT) or the right of way (ROW) fee. Table 1 shows the increase in operating expenses from FY 2022 to FY 2023 and FY 2024.

Table 1: Projected O&M Expenses

1. Sewer Operations was created as a distinct category (formerly part of "Pumping" in FY 2023).

3.1.2.UNITS OF SERVICE

To project DC Water's future water revenues, Raftelis analyzed historic billing system data. Raftelis had previously incorporated billing data provided by DC Water Staff from FY 2011 through FY 2017, and Raftelis updated the forecast with FY 2019-2021 data, along with estimated usage data for FY 2022-2024. The data consisted of billed water usage by customer class and category, the number of water meters by meter size per customer class and category, and impervious area as measured by equivalent residential units (ERUs).

Future water consumption projections in the Model are based on estimated FY 2023 and FY 2024 usage with adjustments in subsequent years to reflect projected declines in consumption of 1.0% annually in FY 2025-2030. These declines in consumption are based on an analysis of historical flow data. Raftelis believes that these reductions are appropriate due to expanded use of low-flow plumbing fixtures and a growing culture of resource conservation. This trend is consistent with the per capita reduction seen in other utilities with similar demographics and service area characteristics. DC Water experienced pandemic-related shifts in consumption in early 2020. Stay-at-home orders increased consumption for residential classes and decreased it for non-residential classes. These shifts appear to be transitory and a reversion to historically normal patterns is projected.

Based on a projection for eligible Customer Assistance Program (CAP) accounts, Raftelis included a reduction of 288,000 Ccf each year beginning in FY 2021. Raftelis' estimation of CAP accounts in FY 2023-FY 2024 is consistent with the Financial Plan, which incorporates 5,000 eligible CAP accounts and an approximate consumption of 48 Ccf per account, per year.

Projected wastewater flow is populated from actual water billings. However, the commercial wastewater category estimated consumption includes units of service for the water exempt category, which includes the Soldiers Home. Based on input from DC Water Staff, it was determined that the water exempt category is still required to pay for sewer services. The exemption from water service billings is a result of an existing agreement where DC Water maintains water facilities at these locations free of charge. Historical and projected consumption is displayed in Table 2.

	FY 2018	FY 2019	FY 2020	FY 2021	FY 2022	FY 2023	FY 2024

Table 2: Historical and Projected Consumption per Class and Category

1. Estimated

2. Projected

Customer data from FY 2019-2021 was provided by DC Water Staff and served as the basis for projecting customer growth or decline. Because of low historical growth in accounts, user accounts were projected to remain constant each year. Historical actual and future projected customers are presented in Table 3.

Table 3: Historical and Projected Customer Meters per Class and Category

Customer Meters	FY 2018	FY 2019	FY 2020	FY 2021	FY 2022	FY 2023	FY 2024
Commercial	9,028	9,095	9,095	9,095	9,095	9,095	9,095
Federal	459	462	462	462	462	462	462

Residential	105,430	107,006	107,006	107,006	107,006	107,006	107,006
Soldier's Home	3	3	3	3	3	3	3
DC Water/Aqueduct	32	41	41	41	41	41	41
Total	124,931	126,704	126,704	126,704	126,704	126,704	126,704

1. Accounts were projected from FY 2019 actuals to smooth fluctuations in the data due to pandemic impacts.

Raftelis also projected ERUs for use in the analysis of the CRIAC. Using a revised ERU count from DC Water's most recent CRIAC Model, Raftelis assumed 420,000 CRIAC units beginning in FY 2021.

3.1.3. CAPITAL PLAN FINANCING

Financing for the Capital Plan is consistent with data from the Financial Plan and is displayed in summary in Table 4. Table 4: Capital Plan Financing

Table 4: Capital Plan Financing					
	2022	2023	2024		
Beginning Balance	\$72,281,343	\$158,584,153	\$214,655,413		
Sources of Funds					
Proceeds from Revenue Bonds	\$400,000,000	\$166,052,000	\$299,929,000

Sources Minus Uses	\$142,460,180	\$(118,108,192)	\$37,879,758		
Ending Balance	\$281,405,247	\$130,946,905	\$135,395,013		

DC Water is faced with a significant capital program over the forecast period to address water and wastewater infrastructure needs and system improvements. For the water utility, the primary drivers of the capital program include repair, replacement, and rehabilitation of water distribution system infrastructure; water pumping facility repairs and improvements; continued implementation of the water lead abatement program; water storage facilities repairs and improvements; and capital contributions to the Washington Aqueduct related to water source of supply.

For the wastewater utility, the primary drivers of the capital program include collection system reinvestment, improvements at the Blue Plains WWTP, including enhanced nitrogen removal facilities; repair, replacement, and rehabilitation of the collection and conveyance systems; and Environmental Protection Agency ("EPA") consent decree requirements associated with DC Water's Long-term Combined Sewer Overflow Control Plan ("CSO LTCP").

DC Water anticipates that the capital plan will be financed through a mix of proceeds from revenue bonds and commercial paper, federal grants, District of Columbia reimbursements, capital contributions from wholesale wastewater customers, revenues generated internally from rates, and cash reserves. Based on our evaluation, it appears that the Financial Plan provides for sufficient funding of the capital program. Raftelis also evaluated the proposed capital financing structure, with particular attention paid to assumptions related to the cost of financing for long-term revenue bonds. DC Water's current underlying bond rating from Standard and Poor's of AAA is an investment grade rating that indicates a strong capability to meet financial obligations. Moody's carries a rating of Aa1 for DC Water. Based on current market conditions, and assuming DC Water would either insure or fund a debt service reserve for future revenue bonds, the current estimated range of interest rates assumed in the Financial Plan is reasonable and provides a level of conservatism in the forecast. Regardless, DC Water should revise these assumptions, as appropriate, during its annual financial planning process. It is possible that alternative long-term financing options could be utilized which would require an update to the projected debt service repayment assumptions.

3.1.4. DEBT SERVICE

Debt service within the Model is based, in part, on information provided by DC Water's Financial Advisor and reflected in the Financial Plan. Raftelis calculated FY 2022-FY 2033 debt service based on projected funding needs in the CIP. In addition to the FY 2022 Subordinate Bond currently on the books, we assumed an additional \$147.3 million in debt would be issued in FY 2022 with a half-year debt service payment. Full debt service on this projected issuance was assumed to occur in FY 2023. It was assumed another \$106.8 million would be issued in FY 2023 with a half year debt service payment. Full debt service payment. Full debt service payment. Full debt service in FY 2023 with a half year debt service payment. Full debt service on this projected issuance was assumed to occur in FY 2024. These assumptions are consistent with the Financial Plan. A summary of the projected debt from is displayed below in Table 5.

Table 5:	Proje	cted D)ebt S	Service
----------	-------	--------	--------	---------

	2023	2024
Existing Debt		
Senior Debt		
1998 Revenue Bonds	\$23,369,450	\$8,110,475

3.2. Comparison to Forecast

DC Water's Financial Plan projects surplus revenues of \$141,570,292 in FY 2023 and \$145,417,159 in FY 2024. The variances of \$(2,680,645) in FY 2023 and \$(3,674,047) in FY 2024 when compared to Raftelis' forecast surpluses of \$138,889,646 and \$141,743,112, respectively, is a result of several factors which are discussed below. While individual variances are highlighted in the following sections, a complete comparison schedule vs. the Financial Plan is also found in the Appendix.

3.2.1.OPERATING REVENUE

As discussed previously in Section 3.1.2, Raftelis has estimated billable water and sewer flows based on FY 2020 and FY 2021 data with adjustments in subsequent years to reflect an anticipated decline in consumption. As a result, Raftelis is projecting operating revenues of \$750,111,139 in FY 2023, which includes \$664,391,069 in retail customer billing revenues and \$85,720,070 in wholesale revenues. Raftelis is projecting operating revenues of \$775,002,667 in FY 2024, which includes \$665,860,428 in retail customer billing revenues and \$89,142,239 in wholesale revenues. A summary of the operating revenue comparison of the Model and the Financial Plan is provided below.

Operating Revenue	FY 2023 DC Water Financial Plan	FY 2023 Raftelis Model	Delta
Volumetric Charges	\$488,728,530	\$486,816,576	\$(1,911,953)
Metering Fee	24,082,852	23,361,672	(721,180)
WSRF	39,717,000	39,717,000	-
Right of Way/PILOT	23,070,220	23,070,220	-
CRIAC Revenue	91,425,600	91,425,600	-
Wholesale Revenue	85,720,070	85,720,070	-
Total Operating Revenue	\$752,744,272	\$750,111,139	\$(2,633,133)
Operating Revenue	FY 2024 DC Water Financial Plan	FY 2024 Raftelis Model	Delta
Volumetric Charges	\$491,974,483	\$489,177,732	\$(2,796,751)
Volumetric Charges Metering Fee	\$491,974,483 24,082,852	\$489,177,732 23,361,672	\$(2,796,751) (721,180)
-			. ,
Metering Fee	24,082,852	23,361,672	. ,
Metering Fee WSRF	24,082,852 39,717,000	23,361,672 39,717,000	. ,
Metering Fee WSRF Right of Way/PILOT	24,082,852 39,717,000 23,429,624	23,361,672 39,717,000 23,429,624	. ,

Table 6: Operating Revenue Comparison

3.2.1.1. Volumetric Charges

Revenues from the volumetric charges are calculated primarily based on the projected rates from Raftelis' COS results multiplied by projected consumption. Slightly different calculation methods resulted in differences between Raftelis' projections and DC Water's Financial Plan, but Raftelis' projections were slightly lower, and thus did not overstate anticipated revenues. In FY 2023, volumetric revenues were 0.4% lower than those in the Financial Plan. Similarly, in FY 2024, volumetric revenues were 0.6% lower than those in the Financial Plan. These slight discrepancies are expected, and do not represent a material difference between Raftelis' forecast and DC Water's Financial Plan.

3.2.1.2. Metering Fee

Revenues from the metering fee are calculated based on the projected rates in the Financial Plan multiplied by the projected customers per meter size. They represent the recovery of some additional Customer Service costs related to metering and billing as described in Section 4.6. Raftelis' projections of revenue from the metering fee differ slightly from the Financial Plan because Raftelis' projections are based on the latest available data on DC Water's meter counts, so a small difference in Metering Fee revenues was anticipated. In both FY 2023 and FY 2024, metering fee revenues were 3.0% lower than those in the Financial Plan.

3.2.1.3. Water System Replacement Fee (WSRF)

The WSRF was originally set to recover approximately \$40 million per year for ten years to fund water system renewal and replacement. Revenues from the WSRF are calculated based on the projected rates in the Financial Plan multiplied by the projected customers per meter size. Raftelis' projection of revenue from the WSRF are consistent with the revenue in DC Water's Financial Plan. DC Water is projected to recover \$39,717,000 in both FY 2023 and FY 2024.

3.2.1.4. Impervious Area Charge

Raftelis' projections for CRIAC revenues are consistent with those in the Financial Plan. CRIAC revenues represent the allocation of some Clean Rivers capital costs to the sewer volumetric rate as described in Section 4.6.

3.2.2.NON-OPERATING REVENUE

Raftelis' projection of non-operating revenues reflects the same amount as DC Water's Financial Plan. A comparison of total revenues is shown below.

	FY 2023 DC Water Financial Plan	FY 2023 Raftelis Model	Delta
Operating Revenue			
Volumetric Charges	\$488,728,530	\$486,816,576	\$(1,911,953)
Metering Fee	24,082,852	23,361,672	(721,180)
Infrastructure Surcharge	39,717,000	39,717,000	-
Right of Way Fee/PILOT	23,070,220	23,070,220	-
CRIAC Revenue	91,425,600	91,425,600	-
Wholesale Revenue	85,720,070	85,720,070	-
Subtotal: Operating Revenue	\$752,744,272	\$750,111,139	\$(2,633,133)
Non-Operating Revenues			
Interest Earnings	\$4,386,863	\$4,386,863	\$ -
Other Revenue	42,668,400	42,668,400	\$ -
Northern Virginia Debt Service	193,246	193,246	\$ -
Subtotal: Non-Operating Revenue	\$47,248,509	\$47,248,509	\$ -
Total Revenue	\$799,992,781	\$797,359,648	\$(2,633,133)

Table 7: Total Revenue Comparison

	FY 2024 DC Water Financial Plan	FY 2024 Raftelis Model	Delta
Operating Revenue			
Volumetric Charges	\$491,974,483	\$489,177,732	\$(2,796,751)
Metering Fee	24,082,852	23,361,672	(721,180)
Infrastructure Surcharge	39,717,000	39,717,000	-
Right of Way Fee/PILOT	23,429,624	23,429,624	-
CRIAC Revenue	110,174,400	110,174,400	-
Wholesale Revenue	89,142,239	89,142,239	-
Subtotal: Operating Revenue	\$778,520,598	\$775,002,667	\$(3,517,931)
Non-Operating Revenues			
Interest Earnings	\$4,427,383	\$4,427,383	\$ -
Other Revenue	44,563,400	44,563,400	\$ -
Northern Virginia Debt Service	193,246	193,246	\$ -
Subtotal: Non-Operating Revenue	\$49,184,029	\$49,184,029	\$ -
Total Revenue	\$827,704,627	\$824,186,696	\$(3,517,931)

The Model forecasts total revenues in the test years (FY 2023 and FY 2024) that diverge from DC Water's projections by less than 0.5% for each test year.

3.2.3.OPERATING EXPENSES

Operating expenses in the Model were forecast from DC Water's FY 2022 Budget and FY 2023-2024 Proposed Budgets. When compared to the Financial Plan, FY 2023-FY 2024 operating expenses are identical given that escalation rates used to project expenses are identical. Note that the following operating expenses are shown with capitalized labor deducted from total Personnel Services.

	•	-	
	FY 2023 DC Water Financial Plan	FY 2023 Raftelis Model	Delta
Personnel Services	\$155,787,994	\$155,787,994	\$ -
Contractual Services	88,504,269	88,504,269	\$ -
Water Purchases	40,334,030	40,334,030	\$ -
Chemicals & Supplies	36,993,885	36,993,885	\$ -
Utilities & Rent	28,798,903	28,798,903	\$ -
Small Equipment	1,107,950	1,107,950	\$ -
PILOT/ROW Fee	23,070,220	23,070,220	\$ -
Total Operating Expenses	\$374,597,251	\$374,597,251	\$ -

Table 8: Operating Expense Comparison

	FY 2024 DC Water Financial Plan	FY 2024 Raftelis Model	Delta
Personnel Services	\$160,468,581	\$160,468,581	\$ -
Contractual Services	91,258,703	91,258,703	\$ -
Water Purchases	41,544,051	41,544,051	\$ -
Chemicals & Supplies	38,305,358	38,305,358	\$ -
Utilities & Rent	29,946,481	29,946,481	\$ -
Small Equipment	1,141,189	1,141,189	\$ -
PILOT/ROW Fee	23,429,624	23,429,624	\$ -
Total Operating Expenses	\$386,093,987	\$386,093,987	\$ -

3.2.4. DEBT SERVICE

Because Raftelis updated the Model's existing debt service based on actual principal and interest schedules provided in the official statement to investors. Slightly different assumptions were used to forecast planned debt issuance, resulting in a de minimis difference in planned debt service. A summary of the debt service comparison is displayed in Table 9.

Debt Service	DC Water Financial Plan 2023	Raftelis Model 2023	Delta
1998 Revenue Bonds	\$23,369,450	\$23,369,450	\$ -
Series 2014A Revenue Bond	16,849,000	16,849,000	-

Series 2019C Subordinate Bond	1,741,338	1,741,338	-
Series 2019D Subordinate Bond	12,305,247	12,305,247	-
Series 2022 Subordinate Bond	36,942,512	36,942,512	-
WASA Bonds – Planned	41,185,439	41,341,555	\$156,117
Total: Debt Service	\$247,936,995	\$248,093,112	\$156,117

1. The delta in total debt service also reflects de minimis differences in existing debt of less than \$1.00, which was applied as an addition to the \$156,116 delta in planned debt.

Debt service for a planned FY 2022 bond issue vary slightly due to the use of different assumptions on the timing and future rates associated with future debt.

To summarize, a comparison of total revenues and expenses is provided in Table 10.

Table 10: Comparison of Revenues and Expenses

	DC Water Financial Plan (2023)	Raftelis Model (2023)	Delta

3.2.5. REVENUE SUFFICIENCY ANALYSIS FINDINGS

Based on our independent projection based on rates and units of service (number of accounts, billed consumption, and impervious ERUs), Raftelis is able to conclude the following:

- Revenues under proposed rate increases are sufficient to fund utility cash requirements in FY 2023 and FY 2024;
- Reserve funds can be maintained at target levels; and
- Debt service coverage is adequate to meet required bond covenants.

4. Cost of Service Analysis

Raftelis evaluated the level of rate equity under the current rate structure. By developing cost of service-based rates and comparing them to proposed DC Water rates for the test years, FY 2023-FY 2024, Raftelis determined if existing water and sewer customer classes were subsidizing each other. Raftelis used the Model described in the previous sections to allocate costs and calculate cost of service-based rates and charges.

4.1. Revenue Requirements

To forecast the level of revenue necessary to ensure financial sufficiency for the utility, revenue requirements must be identified and projected for the test years. Revenue requirements include all costs incurred to operate the water and wastewater systems. These costs represent the annual cash needs of the utility for operation, but also examine existing and proposed debt, debt service coverage requirements, and the funding of target reserve fund balances. Revenue requirements are funded through sources identified in DC Water's capital improvement plan such as revenue bonds, capital reserves, and current year rate revenues. The revenue requirements identified in this process represent the costs that are currently being recovered from the retail rates.

Operations and Maintenance Expenses. First and foremost, the utility must recover costs associated with the routine operation, maintenance, and repair of the system. This component includes items in the DC Water budget such as labor, power, materials, PILOT, ROW fees, and most other costs associated with the day-to-day functioning of the system.

Capital Improvement Plan. Capital needs are one of the single largest components of a water and wastewater utility's cost structure. These expenditures pay for necessary infrastructure rehabilitation, replacements, expansions, and upgrades. Often, a portion of these costs are recovered through fund balance contributions or rate revenue with the balance funded through debt. Since DC Water has designed its metering fee to also recover ongoing AMR costs, this item in the Model has been added as an adjustment and included in the net revenue requirements.

Capital Financing Plan. Capital needs can be funded in a variety of ways, including, for example, revenue bonds, revolving fund loans, and rate revenues. By using the optimal blend of funding sources, it is possible to manage rate impacts, financial stability, and equitably allocate costs to customers over the useful life of the assets.

Debt Service Coverage Requirements. In addition to meeting cash flow needs, revenues must be adequate to satisfy minimum debt service coverage requirements set forth in DC Water's bond covenants. These requirements stipulate minimum debt coverage ratios as well as what revenues and expenses must be included in calculating coverage ratios. DC Water has set a more stringent management target coverage level of 1.6 times, tied to revenue requirements, to ensure availability of cash-funded capital and debt service as a percentage of revenue remains at sustainable levels.

Revenue requirements for each test year are presented in Table 11. Note that the PILOT/ROW Remittance is not included, because although it is an expense, it is ultimately reimbursed by the District of Columbia and is therefore not truly part of DC Water's cost of service.

Revenue Requirements	FY 2023	FY 2024
Operating Expenses ¹	\$381,961,932	\$398,705,362
Debt Service	237,181,056	248,093,111
Adjustments – Coverage Allowance	144,808,634	151,355,867
Total Revenue Requirements	\$763,951,622	\$798,154,340

Table 11: Revenue Requirements for Rate Calculation

1. Unlike the operating expenses shown in Table 10, operating expenses used for rate calculation purposes exclude District charges (payment in lieu of taxes), as these are not direct expenses for DC Water. However, operating expenses for rate calculation include capitalized labor expenses, resulting in a net increase from the operating expenses shown in Table 10.

The revenue requirements are offset by operating and non-operating income other than user charges, resulting in net revenue requirements. The net revenue requirements represent the level of revenues that must be generated from retail user charges to meet the utility's operating and capital needs. Revenue offsets itemized within the Model include wholesale revenues, miscellaneous fees, and interest income. Table 12 summarizes the revenue offsets in the test years.

Revenue Offsets	s	FY 2023	FY 2024
Wholesale Revenue			
LCSA + PI		\$(10,955,826)	\$(11,271,129)

Table 12: Test Years Revenue Offsets (FY 2023 and FY 2024)

Prior to finalizing net revenue requirements, some adjustments were made to ensure accuracy for the CRIAC calculation, and to account for delinquency rates (assumed to be 3%) when setting rates. The table below shows how the net revenue requirements of \$591,491,077 and \$562,628,383 for FY 2023 and FY 2024, respectively, were adjusted.

Revenue Requirements	FY 2023	FY 2024
Unadjusted Net Revenue Requirement	\$591,491,077	\$620,387,667
Remove Capitalized O&M from CRIAC	(2,182,828)	(2,305,292)
Add \$500,000 for CRIAC CAP	500,000	500,000
Add Delinquency Adjustment (3%)	17,694,247	18,557,471
Total Adjusted Revenue Requirements	\$607,502,497	\$637,139,846

Table 13: Adjustments to Net Revenue Requirements

4.2. Allocation of Costs

Once the revenue requirements were projected for the test years, Raftelis evaluated the appropriateness of the allocation factors used in the most recent cost of service analysis. Specifically, Raftelis reviewed each major category of operating costs and identified a reasonable basis of allocation amongst the water volumetric charge, wastewater volumetric charge, and metering fee. Costs allocated to the wastewater volumetric charge were then allocated between the wastewater volumetric charge and the impervious area fee based on information provided in the engineering allocation analysis.

4.2.1.COST OF SERVICE INITIATIVES

The COS process included several initiatives to re-allocate costs. First, 37% of the costs associated with the CRIAC were re-allocated to the sewer volumetric rate. This re-allocation reflects the fact that the sewer utility pays for part of the Clean Rivers program expenses. This effort began in the prior COS Study and is fully phased in as part of this study. Second, the DC Water Operations budget included a reorganization of functions into the Pumping Operations division which required development of blended allocation between water and sewer volumetric rates. Finally, the revenue collected from the Water System Replacement Fee, designed to fund 1% of DC Water's annual renewal and replacement program, was used to offset the water utility's revenue requirements, resulting in a decrease in all water volumetric charges.

4.2.2.COST ALLOCATION METHODOLOGY

Revenue requirements and revenue offsets related directly to providing water service or sewer service were allocated 100% to water or sewer, respectively. Revenue requirements and revenue offsets related entirely to the CSO LTCP were allocated 100% to the CRIAC. Customer service costs were allocated to the metering fee to account for the costs associated with meters and billing. The remaining costs were divided between water and sewer because almost all customers receive a bill for both services. For other direct operating costs, such as Maintenance Services, the same allocation factors were used as in the prior COS Study, with the majority of these costs allocated to wastewater. Engineering and Technical Services, which increased in cost since the previous COS study, are allocated mostly to sewer using the same allocation as Maintenance Services. New O&M categories, CIP Infrastructure Management and Permit Operations, were allocated based on CIP funding allocations and consultation with DC Water staff, respectively. Raftelis used similar percentages as in the last COS study to allocate Administration costs, which were

based on reasonable allocation factors, such as revenues, employees, vehicles, etc., that were related to individual budget centers. These assumptions are consistent with factors identified in DC Water's existing inter-municipal agreements ("IMA").

Responsibility for debt service coverage is distributed proportionately amongst the rates and charges based on the distribution of debt associated with water, sewer, and the CSO LTCP, respectively. Raftelis reviewed and updated allocations of existing debt service based on actual CIP expenditures. Future debt service associated with planned revenue bonds were allocated proportionately based on the projects identified in the CIP.

Table 14 presents the allocation of test year revenue requirements to the water volumetric charge, metering fee, wastewater volumetric charge, and the CRIAC. For the purpose of unit cost calculations, total revenue requirements allocated to each charge component were increased by 3% to reflect the rate of anticipated bill delinquencies prior to calculating rates.

	FY 2023	Water	Meter	Wastewater	CRIAC
Retail Revenue Requirements	\$607,502,497	\$162,396,157	\$24,088,233	\$329,633,511	\$91,384,596

Table 14: Net Revenue Requirement Allocation and Cost of Service Calculation

1. Note that final rates are rounded up only once calculated.

4.3. Metering Fee

The cost pool for the metering fee includes total revenue requirements of \$24,088,233 in FY 2023 and \$24,092,187 in FY 2024. The COS rates of \$7.75/month in both FY 2023 and FY 2024 remain unchanged from the existing metering fee.

4.4. Water Volumetric Rate

As part of a previous COS Study, Raftelis recommended a class-based water volumetric rate to DC Water which was subsequently implemented in 2016. In a class-based volumetric rate structure, the customer classes that exhibit more peaking in their water usage as compared to other classes are required to pay for their larger share of peaking-related costs. Calculating these rates involves allocating water system volumetric costs between base, or average, demand, and peak-demand, a two-step process.

The first step involves the allocation of all water system cost into functional components consistent with the operating characteristics of the utility. For DC Water these functional components included:

- Source of Supply and Treatment;
- Distribution;
- Storage;
- Pumping;
- Customer Service/Meter; and
- Administration/General.

Raftelis worked closely with DC Water Staff to review and evaluate water system operating costs and developed allocation factors to assign these costs into the categories identified above. Raftelis also reviewed historical capital expenditures identified in the Financial Plan over the past decade, which were used as a basis for allocating debt service and coverage between water source of supply and treatment and the distribution system. Other water revenues exclusive of user charges (revenue offsets) were allocated to the various system functions based on the revenue source. The most significant revenue offsets of note were the DC Fire Protection Fee, which was allocated evenly between water source of supply and treatment and water distribution, water service fees/taps, which was assigned to water distribution, and Water System Replacement Fee (WSRF) revenue, offsets the water volumetric revenue requirement.

Table 15 summarizes the allocation of water system costs to functional categories. Supporting detail for the cost allocations is provided in the Appendix.

	FY 2023 \$ Allocated to Water	Source of Supply & Treatment	Distribution	Storage	Pumping	Customer Service/ Meter	Admin/ General
Operations	\$88,227,252	\$5,854,451	\$61,106,402	\$7,713,129	\$9,758,904	\$955,420	\$2,838,947
Administration	\$46,472,413	\$ -	\$ -	\$ -	\$ -	\$ -	\$46,472,413
Debt Service	\$57,141,324	\$15,520,251	\$37,709,205	\$ -	\$ -	\$3,411,869	\$500,000

% Allocation		14.8%	67.6%	4.7%	5.9%	3.9%	3.1%

Table 15: Allocation of Water Costs into Functional Categories

	FY 2024 \$ Allocated to Water	Source of Supply & Treatment	Distribution	Storage	Pumping	Customer Service/ Meter	Admin/ General
Operations	\$91,724,454	\$6,133,169	\$63,466,032	\$8,010,972	\$10,135,745	\$1,001,794	\$2,976,743
Administration	\$48,434,742	\$ -	\$ -	\$ -	\$ -	\$ -	\$48,434,742
Debt Service	\$54,268,439	\$14,934,835	\$35,987,733	\$ -	\$ -	\$2,845,871	\$500,000
Revenue Offsets	\$(61,755,234)	\$(6,383,892)	\$(10,585,892)	\$ -	\$ -	\$ -	\$(44,785,450)
Adjustment for Coverage	\$32,261,064	\$8,960,901	\$21,592,640	\$ -	\$ -	\$1,707,523	\$ -
Net Water System Revenue Requirements	\$164,933,465	\$23,645,013	\$110,460,512	\$8,010,972	\$10,135,745	\$5,555,188	\$7,126,035
% Allocation		14.3%	67.0%	4.9%	6.1%	3.4%	4.3%

1. Note that the water revenue requirements above do not include the 3% delinquency adjustment, and they also do not include the re-allocation of a portion of water costs to the metering fee, shown in the "Customer Service/Meter" column of Table 16. Therefore, they differ from the total water revenue requirements shown in Table 14.

Once costs were allocated into functional components, the next step in the process was to allocate functional costs into service cost or behavioral cost components, particularly volumetric costs into base and peaking components. Drawing on discussion with DC Water staff and industry experience, Raftelis developed reasonable percentages for distributing costs between serving base and peak demand. Table 16 summarizes the allocation of water system costs to functional components. Supporting detail for the cost allocations is provided in the Appendix.

Table 16: Allocation of Functional Costs into Cost Categories

	FY 2023	Base	Extra Capacity	Customer Service/Meter	Admin/General
Source of Supply (1)	\$64,635,351	\$50,790,961	\$13,844,390	\$ -	\$ -
Distribution	70,519,568	59,941,633	10,577,935	-	-

Source of Supply (1)	\$65,189,064	\$51,226,073	\$13,962,991	\$ -	\$ -
Distribution	68,916,461	58,578,992	10,337,469	-	-
Storage	8,010,972	6,408,778	1,602,194	-	-
Pumping	10,135,745	5,067,872	5,067,872	-	-
Customer Service/Meter	5,555,188	-	-	5,555,188	-
Admin/General	7,126,035	-	-	-	7,126,035
	\$164,933,465	\$121,281,715	\$30,970,527	\$5,555,188	\$7,126,035

1. Water purchase costs were re-allocated discretely in this step from Distribution to Source of Supply (compare to Net Water System Revenue Requirements in Table 15).

4.4.1.WATER SUPPLY & TREATMENT

DC Water, the City of Arlington (Arlington), and the City of Falls Church (Falls Church) purchase potable water from the Washington Aqueduct. The total annual cost of the Aqueduct, which is operated by the Army Corps of Engineers, is allocated amongst these three utilities based on both average and peak usage. The cost allocation methodology assigns costs into fixed and variable components. Fixed costs, which represent the majority of operating costs and include costs related to providing system capacity, are allocated based on peak-daily demand. Variable costs, which are a function of the amount of water produced and include chemicals and electricity, are allocated based on average usage.

It is important to note the wholesale water purchase methodology does not include a specific allocation of system capacity that DC Water has "purchased" in the Washington Aqueduct. However, DC Water pays for extra water capacity to meet peak demand, so it is reasonable to allocate some portion of source of supply and treatment costs to an extra capacity component. For the purpose of this analysis, and based on a review of historical billing data, Raftelis assigned 78% of water source of supply and treatment to the base component and the remaining 22% of water source of supply and treatment to the extra capacity component. Although it would be preferable to review more detailed water production statistics to enhance the precision of this estimate, DC Water does not own water production facilities, so allocating about a quarter of source of supply and treatment costs to extra capacity is reasonable and consistent with industry standards and practices.

4.4.2.WATER DISTRIBUTION

Based on the results of the Customer Class Segmentation Study completed by Raftelis in 2011, DC Water's system peaks significantly in aggregate. This is consistent with a predominantly urban customer base with more limited elective consumption, particularly irrigation from residential customers. As a result, a significant portion of water transmission and distribution costs are associated with serving a base level of demand. However, it is a common practice within the industry to allocate a small percentage of distribution system costs to a peaking component, as DC Water has sized its system to serve peak demand. For this COS Study, Raftelis assigned 15% of the distribution system costs to system peaking. We believe this is consistent to percentages used in other studies for utilities with similar operating characteristics.

4.4.3.WATER STORAGE

Like water distribution, it is reasonable to allocate a portion of water storage costs to a peaking component. DC Water utilizes storage facilities to provide adequate supply and pressure to serve both average and peak demand. Because peaking is relatively low, the extra capacity component should include a relatively small portion of total

storage costs. For this COS analysis, Raftelis assigned 20% of the storage costs to system peaking. We believe this is consistent with percentages used in other studies for utilities with similar operating characteristics.

4.4.4.WATER PUMPING

A significant portion of the costs allocated to water pumping are associated with the electricity required to operate the pumping facilities. DC Water has sized its pumping equipment to serve both average and peak demand. During peak times, DC Water pays additional cost for power to accommodate the higher demand for pumping, and it is appropriate to allocate this additional cost to a peaking component. As a result, Raftelis has assigned 50% of the pumping costs to system peaking. We believe this is consistent to percentages used in other studies for utilities with similar operating characteristics.

Raftelis reviewed and evaluated peak monthly usage compared to average monthly usage for a five-year period from 2012-2017 for its established customer classes. The peak monthly capacity factors from this analysis were applied to projected annual usage in FY 2023 and FY 2024. The max month total capacity is determined by multiplying the average monthly usage by the peaking factor for each customer class. The total monthly capacity is subtracted from the average monthly usage to determine the extra capacity. The results are presented in Table 17.

	Base (FY 2023)		Max-Month (FY 2023)		
	Annual Usage (CCF)	Average Monthly Usage (CCF)	Peaking Factor	Total Monthly Capacity (CCF)	Extra Capacity (CCF)

Total	30,226,000	2,518,833		3,203,849	685,016

Allocation factors for base and peaking were determined based on the proportion of annual usage and extra capacity, respectively, falling under each customer class category. These factors were multiplied by the costs allocated to base

and peak flows, respectively. The volumetric revenue requirements were escalated at a delinquency rate of 3%. The result was a distribution of water volumetric revenue requirements by customer class (see Table 18).

FY 2023	Base	Peaking	Base	Peaking	Allocation for Volumetric Revenue Requirements
Residential Tier 1, 0-4 ccf	11.0%	0.0%	\$13,978,032	\$ -	\$14,397,373

Total	100%	100%	\$128,407,750	\$30,970,527	\$164,159,626

Volumetric revenue requirements were divided by the respective usage in each customer class, resulting in cost of service-based rates, below.

Table 19: Class-Based Volumetric Rates

FY 2023	Volumetric Revenue Requirements	Annual Usage (CCF)	Class Based Volumetric Rate (per CCF)
Residential Tier 1	\$14,397,373	3,365,394	\$4.28
Residential Tier 2	14,932,544	2,676,606	\$5.58
Multi-Family	45,889,892	9,384,000	\$4.90
Commercial	57,840,595	10,024,000	\$5.78
Federal	24,811,907	4,300,000	\$5.78
Municipal	4,523,845	784,000	\$5.78
Total	\$162,396,157	30,534,000	

FY 2024	Volumetric Revenue Requirements	Annual Usage (CCF)	Class Based Volumetric Rate (per CCF)
Residential Tier 1	\$14,572,415	3,330,303	\$4.38
Residential Tier 2	15,084,654	2,648,697	\$5.70
Multi-Family	46,418,469	9,290,000	\$5.00
Commercial	58,443,972	9,924,000	\$5.89
Federal	25,070,132	4,257,000	\$5.89
Municipal	4,569,984	776,000	\$5.89
Total	\$164,159,626	30,226,000	

1. Note that rates shown are rounded.

For FY 2023, allocations to the water volumetric cost pool result in revenue requirements of \$162,396,157 which is then divided by projected units of service for the test year of 30,534,000 Ccf. Non-Residential customers had the highest peaking factors and, therefore, were allocated a higher proportion of peaking costs, resulting in a volumetric rate of \$5.78 per Ccf, which is \$1.50 per Ccf higher than the Tier 1 Residential rate of \$4.28 per Ccf. Conversely, Multi-Family customers had lower peaking factors and, therefore, were allocated a lower proportion of peaking costs, resulting in a volumetric rate for Multi-Family customers of \$4.90 per Ccf, which is \$0.68 per Ccf lower than the Tier 2 Residential rate of \$5.58 per Ccf.

For FY 2024, allocations to the water volumetric cost pool result in revenue requirements of \$164,159,626, which is then divided by projected units of service for the test year of 30,226,000 Ccf. Non-Residential customers had the highest peaking factors and, therefore, were allocated a higher proportion of peaking costs, resulting in a volumetric rate of \$5.89 per Ccf, which is \$1.51 per Ccf higher than the Tier 1 Residential rate of \$4.38 per Ccf. Conversely, Multi-Family customers had lower peaking factors and, therefore, were allocated a lower proportion of peaking costs, resulting in a volumetric rate for Multi-Family customers of \$5.00 per Ccf, which is \$0.70 per Ccf lower than the Tier 2 Residential rate of \$5.70 per Ccf.

4.5. Wastewater Volumetric Rate

One major objective of the cost of service process is to appropriately rebalance revenue recovery between water and wastewater rates. Since the last study, water costs have increased faster than wastewater costs, suggesting a need to rebalance volumetric rates. As compared to water revenue requirements, which totaled \$162,396,157 and \$164,159,626 in FY 2023 and FY 2024, respectively, wastewater revenue requirements totaled \$329,633,511 in FY 2023 and \$338,754,805 in FY 2024. Wastewater revenue requirements were divided by the test years' projected usage volumes of 29,279,333 Ccf and 28,971,416 Ccf, respectively, which results in respective volumetric rates of \$11.26 and \$11.70.

4.6. Impervious Area Charge

Total revenue requirements allocated to the CRIAC for the test years totaled \$91,384,596 for FY 2023 and \$110,133,229 for FY 2024. As discussed in section 4.2.1, 37% of the CRIAC costs were re-allocated to the wastewater volumetric charge to reflect the fact that wastewater pays for a portion of CSO mitigation costs. Raftelis divided the CRIAC revenue requirements by units of service, as measured by ERUs, and calculated respective rates of \$18.14 and \$21.86 per ERU for FY 2023 and FY 2024. The roughly 20% increase in the CRIAC from FY 2023 to FY 2024 is due to the timing of CSO-related debt payments.

4.7. WAD Rate and Groundwater Fee

Raftelis updated DC Water's Washington Aqueduct Rate (WAD Rate) and Groundwater Fee for the test years. The WAD Rate was established in 2021 to recover the cost of treating low-strength, high-volume effluent from the Washington Aqueduct. A separate report submitted to DC Water on June 25, 2021 outlines the justification and approach for the WAD Rate calculation methodology. The Groundwater Fee, last updated in FY 2018, was updated according to the previously established methodology used in 2018. Table 20 outlines these fees for the two test years. Going forward, both the WAD Rate and the Groundwater Fee will be updated as part of the biannual COS Study as both are approved through the same retail rate setting process.

FY 2023	WAD Rate	Groundwater Fee
Revenue Requirements	\$142,951,392	\$152,385,745
Offset Deduction	\$(48,884,113)	\$(52,110,314)
Net Revenue Requirements	\$94,067,279	\$100,275,431
Sewer Flow (Ccf)	29,279,333	29,279,333
Rate	\$3.21	\$3.42
FY 2024	WAD Rate	Groundwater Fee
FY 2024 Revenue Requirements	WAD Rate \$147,686,980	Groundwater Fee \$156,789,757
Revenue		
Revenue Requirements	\$147,686,980	\$156,789,757
Revenue Requirements Offset Deduction Net Revenue	\$147,686,980 \$(52,055,240)	\$156,789,757 \$(55,263,696)

Table 20: WAD Rate and Groundwater Fee

4.8. COS / Rate Equity Conclusions

The results of the COS analysis support several conclusions and/or recommendations for consideration by DC Water staff and the Board, which are summarized below.

- Overall bill increases for FY 2023 are driven primarily by volumetric rates for water and sewer. Bill increases for FY 2024 are primarily due to increased CRIAC borrowing as volumetric rate increases moderate.
- The cost of service suggests that DC Water should increase its water and sewer rates year over year, as compared to existing FY 2022 rates to fully recover costs and meet financial policy targets.
- The calculated water and sewer rates are designed to generate revenues consistent with projected revenues in the Financial Plan in FY 2023 and FY 2024.
- The Metering Fee and WSRF will remain constant during the test year period.
- The PILOT District Charge on the DC Water bill is increasing during the test year period.
- Average customer usage remains at 5.42 Ccf/month, as it was for the previous COS study.

In general, the existing rate structure provides for a reasonable allocation of cost recovery to utility customers. Raftelis recommends no additional rate structure changes at this time.

5. Proposed Rates and Impacts

Through our COS analysis, Raftelis calculated proposed rates for FY 2023 and FY 2024, along with corresponding customer impacts. Table 21 presents the existing and proposed rates, along with the increases presented with both percentages and dollars. Table 22 and Table 23 present the customer impacts for a typical Residential customer and a typical Residential CAP customer, respectively, associated with the proposed FY 2023 and FY 2024 rates.

	FY 2022	FY 2023	FY 2024	FY 2	2023	FY 2	2024
	(Existing)	(Proposed)	(Proposed)	\$ Difference	% Difference	\$ Difference	% Difference
Water Volumetric Residential – Tier 1	\$3.63	\$4.28	\$4.38	\$0.65	17.9%	\$0.10	2.3%
Water Volumetric Residential – Tier 2	\$4.74	\$5.58	\$5.70	\$0.84	17.7%	\$0.12	2.2%

Groundwater Fee	\$2.83 ¹	\$3.42	\$3.50	\$0.59	20.8%	\$0.08	2.3%

Table 21: Existing and Proposed Rates

1. The Groundwater Fee currently in effect was originally calculated in 2018, so the 20.8% increase in the proposed fee for FY 2023 reflects increases in costs since 2018.

The tables below show the typical customer's bill under existing and proposed rates. The typical bill is based on a 5/8" meter and 1 ERU of impervious area. As was the case in the previous COS study completed in 2020, the average customer usage is 5.42 Ccf/month.

	Current (FY 2022)	Calculated (FY 2023)	Calculated (FY 2024)	\$ C		2023 % Change	\$ C		2024 % Change

Table 22: Residential Customer Monthly Bill Impacts

Customers who qualify for DC Water's Customer Assistance Program (CAP) receive a discount on their bill, as shown below. CAP customers receive their first 4 Ccf of monthly water and sewer usage free, and the District PILOT and ROW charges associated with the first 4 Ccf of usage are also waived. CAP customers do not pay the Water System Replacement Fee. In addition, CAP customers pay a reduced CRIAC each month. Beginning in FY 2021, DC Water increased the CRIAC discount from 50% to 75%.
