

Past Sample Results

Note: MPN = most probable number

*Consistent with public health and U.S. Environmental Protection Agency standards, swimming is not recommended when *E. coli* levels exceed 410 MPN/100 mL.

Historical data indicate typical *E. coli* levels in the Potomac River can range from 10 to 5,000 MPN/100mL. Variability in *E. coli* results is common and influenced by factors such as weather conditions, runoff, aging sewer infrastructure, and illicit discharges.

January 29 – February 8
