Monthly Operations Report for Combined Sewer System Month: January 2013

Table of Contents

1. INTRODUCTION

2. OPERATION AND MAINTENACE

- 2.1 Regulators
- 2.2 Outfalls, Tide Gates and CSO Signs
- 2.3 Pumping Stations
- 2.4 Northeast Boundary Swirl Facility
- 2.5 Inflatable Dams

3. DRY WEATHER OVERFLOWS

4. SOLIDS AND FLOATABLES CONTROL

- 4.1 Catch Basin Cleaning
- 4.2 BMP Demonstration Projects
- 4.3 Skimmer Boat Programs
- 4.4 CSS Litter Control

5. MONITORING

- 5.1 Bar Racks at Main & O Street
- 5.2 Rainfall Data

1. INTRODUCTION

The District of Columbia Water and Sewer Authority (DC Water) operates a wastewater collection system comprised of separate and combined sewers. Separate storm and sanitary sewers serve parts of the District. In the combined sewer system (CSS), there is a single sewer to convey storm water and sanitary wastes. The area served by combined sewers comprises about one-third of the District.

During dry weather, sanitary wastes collected in the CSS are conveyed to the DC Water's wastewater treatment plant at Blue Plains (BPWWTP or the Blue Plains WWTP). During periods of rainfall, the capacity of a combined sewer may be exceeded and the excess flow, which is a mixture of storm water and sanitary wastes, is discharged directly to the Anacostia River, Rock Creek or the Potomac River or their tributary waters. This report summarizes the operations of the operations of the combined sewer system for the month indicated.

2. OPERATION AND MAINTENACE

2.1 Regulators

Regulators divert combined sewage to interceptors, which convey flow to BPWWTP for treatment. When flows exceed the capacities of the systems such as during significant rain events, regulators divert excess flow to CSO outfalls which discharge to receiving waters. The following table summarizes inspections of CSO regulators in the collection system.

Table 2-1

Notes:

1. Structure no longer functions as a combined sewer overflow regulator structure.

2. Where construction is indicated to be in progress at a regulator, the contractor maintains flow (i.e. prevents DWO) during construction by flow diversion, bypass pumping, fluming, sandbagging or other means.

2.2 Outfalls, Tide Gates and CSO Signs

The following table summarizes inspections, maintenance and work performed on outfall structures, tide gates and CSO signs in the collection system.

Potomac	31	4	5	#2 Sanitary Pump	January 1-31	Pump being rehabbed	March 2013				
				#3 Screen	January 1-11	Screen being rehabbed	Restored January 11, 2013				
				#1 Screen	January 1-23	Screen being rehabbed	Restored January 24, 2013				
				#2 Screen	January 24-29	Screen being rehabbed	Restored January 30, 2013				

Table 2-3Pumping Stations – Inspections and Equipment in Service

Notes:

1. The schedule to restore to service is impacted by the type and age of equipment. In some cases, the condition of equipment and the lack of availability of replacement parts necessitate complete replacement of the unit or element or custom fabrication of needed parts to return the units to service. For these and other reasons, projects are underway for the rehabilitation of the pumping stations.

1 uniping Stations – 1 Teventive Maintenance										
		Type of Preventive Maintenance

 Table 2-8

 Northeast Boundary Swirl Facility – Wet Weather Operations

Chlorination/Dechlorination Systems.

The table below summarizes the information about operation of Swirl Facility chlorination and dechlorination systems during storm events. Chemical feed systems were activated during the storms in which flows were substantial enough to overflow the mix chamber weir. Included in the table are results of residual chlorine, enterococcus and fecal coliform testing for samples taken in the Swirl Facility mix chamber and at the facility effluent outfall to the Anacostia River.

Taking a grab sample and immediately testing it with a portable analyzing kit obtain test results for residual chlorine. Samples for fecal coliform and enterococcus are taken from the designated sample point, treated with sodium bisulfate to remove any residual chlorine, and conveyed to the Blue Plains Wastewater Treatment Plant Laboratory for testing.

2.5 Inflatable Dams

DC WATER operates and maintains twelve inflatable dams at eight different locations. The structure number, location and number of dams per site are presented in Table 2-10. The inflatable dams consist of multi-ply elastomeric (i.e., "rubber") fabric dams installed in major overflow conduits within the combined sewer system. The objective of the inflatable dam installation is to increase the effective depth to which the sewage must rise in the combined sewer before overflows occur. The effect of the installation is to retain a greater volume of combined sewage flow resulting from low to moderate intensity storms by maximizing storage within the CSS. During higher intensity storms, when the full carrying capacity of the overflow conduit is required to prevent upstream flooding, the dam is deflated automatically. Inflatable dam operations are summarized below:

Inflatable Dam		Was Dam Out of Service	2		Schedule to Restore to
Structure No	Date Inspected	During the Month?	Dates out of Service	Reason	Service

3. DRY WEATHER OVERFLOWS

There was no dry weather combined sewer overflow during January 2013.

Sanitary Sewer Overflows:

Location	Suitland Parkway near Irving Street, SE.
	One of DC Water contractors inspecting storm sewer outfalls observed sanitary waste in the outfall near Harford Street and 22 nd Street, SE. A crew dispatched to investigate further found an overflowing manhole with a builder of street and ether builder of street and street
Cause	with a buildup of grease and other debris near a broken section of pipe in the 12 inch sanitary sewer.
Date/ Time Discovered	January 10, 2013 at approximately 12:15 pm.
Action Taken	The crew removed the grease and cleared the sewer.
Date/Time Discharge Ceased	January 10, 2013 at approximately 11:30 pm.
Estimated Volume	Approximately 50,000 gallons.
Did Overflow Reach Receiving water?	Yes. The Anacostia River
	Corinthian Contractors replaced the broken sections of pipe on the 12 inch sanitary sewer. To determine
	what additional steps may be needed to prevent recurrence at this location, we have requested our
	Department of Engineering and Technical Services - Planning Section to prioritize the inspections of
Action taken to prevent reoccurrence	sewers near this location in the overall sewer system assessment program.

SOLIDS AND FLOATABLES CONTROL

4.1 Catch Basin Cleaning

The following tables summarize catch basin cleaning in the Anacostia CSO area and in the entire sewer system:

4.2 BMP Demonstration Projects

DC WATER operates the following demonstration projects designed to remove solids and floatables from CSO prior to discharge.

- Netting system at CSO 018 to Anacostia River
- Bar Rack at CSO 040 and 041 to Rock Creek

Table 4-2BMP Demonstration Projects – Report

Facility	Date Inspected	Condition	Work Needed	Work performed	Material Removed (CY)
Netting System CSO 018	1/18/2013	Netting platform	Boom and	Contractor onsite	None collected
		dropped under the water	flotation	installing repaired	
		level in the river.	replacement	platform.	
Bar Rack CSO 040	1/9/2013	Good	None	Routine Cleaning	(1)
Bar Rack CSO 041	1/3/2013	Good	None	Routine Cleaning	(1)

Notes:

(1) System is designed such that captured solids and floatable are conveyed to Blue Plains for treatment.

4.3 Anacostia River Floating Debris Removal Program

This program was initiated in October 1992 to remove floating debris from Anacostia and Potomac Rivers on a routine basis. The program has continued from that time and is now under the auspices of DC WATER, Department of Sewer Services. The floating debris removal program utilizes a skimmer boat and support boats to remove floatable debris from the Rivers as well as trash, which accumulates on the riverbanks and in the mud flats at low tides. Work for the most part is directed toward the Anacostia River. The boats pick up debris five days a week. Operations are summarized as follows:

Program Operation	5-day work week, excluding holidays, weather permitting
Work Days this month:	21
Days not Operating	11
Reason not Operating	High winds, low tide, and PM/repair service.
# Skimmer in Fleet	3 skimmers
# Skimmers Out of Service	3
Dates	B28: 1/1 – 1/31, B29: 1/1 – 1/31, B32: 1/10 and 1/30 - 1/31
Reason	B28: hydraulic leak front ram and crimped throttle cable.
	B29: hydraulic leak both propulsion pods.
	B32: STBD wing sticking and separated weld on STBD wing.
Plan to Restore to Service	B28: ETR Feb 2013, B29: ETR unknown. B32: ETR Feb 2013
Volume Material Collected	10 tons.
Nature of Material	Bottles, cans, natural debris and plastics.

Table 4-3 Anacostia River Floating Debris Removal Program – Summary

4.4 CSS Litter Control

This section describes DC WATER's efforts to coordinate litter control efforts with the National Park Service and D.C. Department of Public Works to maximize litter control efforts in the combined sewer system.

Status: no activities this month.

5 MONITORING

5.1 Condition Report Bar Racks at Main and O Street Storm Pumps

DC Water performs visual surveys of the bar racks at Main and O Street Pumping Stations to characterize the quantity and nature of floatable discharge. The physical condition of the bar racks and any maintenance requirements are also noted.

- 5.2 Rainfall Data

1. INTRODUCTION

The District of Columbia Water and Sewer Authority (DC Water) operates a wastewater collection system comprised of separate and combined sewers. Separate storm and sanitary sewers serve parts of the District. In the combined sewer system (CSS), there is a single sewer to convey storm water and sanitary wastes. The area served by combined sewers comprises about one-third of the District.

During dry weather, sanitary wastes collected in the CSS are conveyed to the DC Water's wastewater treatment plant at Blue Plains (BPWWTP or the Blue Plains WWTP). During periods of rainfall, the capacity of a combined sewer may be exceeded and the excess flow, which is a mixture of storm water and sanitary wastes, is discharged directly to the Anacostia River, Rock Creek or the Potomac River or their tributary waters. This report summarizes the operations of the operations of the combined sewer system for the month indicated.

2. OPERATION AND MAINTENACE

2.1 Regulators

Regulators divert combined sewage to interceptors, which convey flow to BPWWTP for treatment. When flows exceed the capacities of the systems such as during significant rain events, regulators divert excess flow to CSO outfalls which discharge to receiving waters. The following table summarizes inspections of CSO regulators in the collection system.

Table 2-1

Notes:

1. Structure no longer functions as a combined sewer overflow regulator structure.

2. Where construction is indicated to be in progress at a regulator, the contractor maintains flow (i.e. prevents DWO) during construction by flow diversion, bypass pumping, fluming, sandbagging or other means.

2.2 Outfalls, Tide Gates and CSO Signs

The following table summarizes inspections, maintenance and work performed on outfall structures, tide gates and CSO signs in the collection system.

				#1 Screen	February 13-28	Screen being rehabbed	April 2013				

 Table 2-3

 Pumping Stations – Inspections and Equipment in Service

Notes:

1. The schedule to restore to service is impacted by the type and age of equipment. In some cases, the condition of equipment and the lack of availability of replacement parts necessitate complete replacement of the unit or element or custom fabrication of needed parts to return the units to service. For these and other reasons, projects are underway for the rehabilitation of the pumping stations.

 Table 2-8

 Northeast Boundary Swirl Facility – Wet Weather Operations

1. The influent flow meter is not reading. Flow volumes are approximated.

Chlorination/Dechlorination Systems.

The table below summarizes the information about operation of Swirl Facility chlorination and dechlorination systems during storm events. Chemical feed systems were activated during the storms in which flows were substantial enough to overflow the mix chamber weir. Included in the table are results of residual chlorine, enterococcus and fecal coliform testing for samples taken in the Swirl Facility mix chamber and at the facility effluent outfall to the Anacostia River.

Taking a grab sample and immediately testing it with a portable analyzing kit obtain test results for residual chlorine. Samples for fecal coliform and enterococcus are taken from the designated sample point, treated with sodium bisulfate to remove any residual chlorine, and conveyed to the Blue Plains Wastewater Treatment Plant Laboratory for testing.

2.5 Inflatable Dams

DC WATER operates and maintains twelve inflatable dams at eight different locations. The structure number, location and number of dams per site are presented in Table 2-10. The inflatable dams consist of multi-ply elastomeric (i.e., "rubber") fabric dams installed in major overflow conduits within the combined sewer system. The objective of the inflatable dam installation is to increase the effective depth to which the sewage must rise in the combined sewer before overflows occur. The effect of the installation is to retain a greater volume of combined sewage flow resulting from low to moderate intensity storms by maximizing storage within the CSS. During higher intensity storms, when the full carrying capacity of the overflow conduit is required to prevent upstream flooding, the dam is deflated automatically. Inflatable dam operations are summarized below:

Inflatable Dam		Was Dam Out of Service			Schedule to Restore to
Structure No	Date Inspected	During the Month?	Dates out of Service	Reason	Service
14 - East	2/20/2013	No	N/A	N/A	N/A

4.2 BMP Demonstration Projects

DC WATER operates the following demonstration projects designed to remove solids and floatables from CSO prior to discharge.

- Netting system at CSO 018 to Anacostia River
- Bar Rack at CSO 040 and 041 to Rock Creek

Table 4-2BMP Demonstration Projects – Report

Facility Netting System CSO 018	Date Inspected 2/28/2013	<i>Condition</i> Good	Work Needed Change nets	Work performed Changed nets	Material Removed (CY) 220 pounds
Bar Rack CSO 040	2/12/2013	Good	None	Routine Cleaning	(1)
Bar Rack CSO 041	2/14/2013	Good	None	Routine Cleaning	(1)

Notes:

(1) System is designed such that captured solids and floatable are conveyed to Blue Plains for treatment.

4.3 Anacostia River Floating Debris Removal Program

This program was initiated in October 1992 to remove floating debris from Anacostia and Potomac Rivers on a routine basis. The program has continued from that time and is now under the auspices of DC WATER, Department of Sewer Services. The floating debris removal program utilizes a skimmer boat and support boats to remove floatable debris from the Rivers as well as trash, which accumulates on the riverbanks and in the mud flats at low tides. Work for the most part is directed toward the Anacostia River. The boats pick up debris five days a week. Operations are summarized as follows:

Program Operation	5-day work week, excluding holidays, weather permitting
Work Days this month:	19
Days not Operating	9
Reason not Operating	High winds, low tide, and PM/repair service.
# Skimmer in Fleet	3 skimmers
# Skimmers Out of Service	1 skimmer
Dates	B28: 2/1 - 2/4, 2/6, 2/15 - 2/20, 2/26 B29: 2/1 - 2/28
	B32 2/1 - 2/6
Reason	B28: wing and conveyor screens not working.
	B29: hydraulic oil leaking from both propulsion pods.
	B32: broken weld on wing mount.
Plan to Restore to Service	B28: repaired 2/27 B29: ETR unknown B32: repaired 2/7.
Volume Material Collected	20 tons.
Nature of Material	Bottles, cans, natural debris and plastics.

Table 4-3 Anacostia River Floating Debris Removal Program – Summary

4.4 CSS Litter Control

This section describes DC WATER's efforts to coordinate litter control efforts with the National Park Service and D.C. Department of Public Works to maximize litter control efforts in the combined sewer system.

Status: no activities this month.

5. MONITORING

5.1 Condition Report Bar Racks at Main and O Street Storm Pumps

DC Water performs visual surveys of the bar racks at Main and O Street Pumping Stations to characterize the quantity and nature of floatable discharge. The physical condition of the bar racks and any maintenance requirements are also noted.

Table 5.1Bar Racks at Main & O Street Pumping Stations

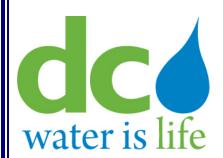

Inspector: Claude Price

- 5.1 Bar Racks at Main & O Street
- 5.2 Rainfall Data

1. INTRODUCTION

The District of Columbia Water and Sewer Authority (DC Water) operates a wastewater collection system comprised of separate and combined sewers. Separate storm and sanitary sewers serve parts of the District. In the combined sewer system (CSS), there is a single sewer to convey storm water and sanitary wastes. The area served by combined sewers comprises about one-third of the District.

During dry weather, sanitary wastes collected in the CSS are conveyed to the DC Water's wastewater treatment plant at Blue Plains (BPWWTP or the Blue Plains WWTP). During periods of rainfall, the capacity of a combined sewer may be exceeded and the excess flow, which is a mixture of storm water and sanitary wastes, is discharged directly to the Anacostia River, Rock Creek or the Potomac River or their tributary waters. This report summarizes the operations of the operations of the combined sewer system for the month indicated.

2. OPERATION AND MAINTENACE

2.1 Regulators

Regulators divert combined sewage to interceptors, which convey flow to BPWWTP for treatment. When flows exceed the capacities of the systems such as during significant rain events, regulators divert excess flow to CSO outfalls which discharge to receiving waters. The following table summarizes inspections of CSO regulators in the collection system.

1. Structure no longer functions as a combined sewer overflow regulator structure.

2. Where construction is indicated to be in progress at a regulator, the contractor maintains flow (i.e. prevents DWO) during construction by flow diversion, bypass pumping, fluming, sandbagging or other means.

2.2 Outfalls, Tide Gates and CSO Signs

The following table summarizes inspections, maintenance and work performed on outfall structures, tide gates and CSO signs in the collection system.

2.3 Pumping Stations

Pumping station operations are summarized in the table below.

	Pumping Stations – Inspections and Equipment in Service							
Pumping	No. of	No.	No.	Screens or Pumps				
Station	Inspections	Screens	Pumps	Out of Service	Dates	Reason	Schedule to Restore to Service ¹	
Main	31	4	10	#2 Screen	March 1-31	Screen being rehabbed	April 2013	
Eastside	31	2	4	#2 Screen	March 1-31	Screen being rehabbed	May 2013	
Poplar Point	31	2	3	#1 Screen	March 1-31	Screen being rehabbed	June 2013	
Potomac	31	4	5	#2 Sanitary Pump	March 1-29	Pump being rehabbed	Restored March 30, 2013	
				#1 Screen	March 1-31	Screen being rehabbed	April 2013	

Table 2-3Pumping Stations – Inspections and Equipment in Service

Notes:

1. The schedule to restore to service is impacted by the type and age of equipment. In some cases, the condition of equipment and the lack of availability of replacement parts necessitate complete replacement of the unit or element or custom fabrication of needed parts to return the units to service. For these and other reasons, projects are underway for the rehabilitation of the pumping stations.

i unping Stations – i reventive Maintenance						
		Type of Preventive Maintenance

 Table 2-8

 Northeast Boundary Swirl Facility – Wet Weather Operations

1. The influent flow meter is not reading. Flow volumes are approximated.

Chlorination/Dechlorination Systems.

The table below summarizes the information about operation of Swirl Facility chlorination and dechlorination systems during storm events. Chemical feed systems were activated during the storms in which flows were substantial enough to overflow the mix chamber weir. Included in the table are results of residual chlorine, enterococcus and fecal coliform testing for samples taken in the Swirl Facility mix chamber and at the facility effluent outfall to the Anacostia River.

Taking a grab sample and immediately testing it with a portable analyzing kit obtain test results for residual chlorine. Samples for fecal coliform and enterococcus are taken from the designated sample point, treated with sodium bisulfate to remove any residual chlorine, and conveyed to the Blue Plains Wastewater Treatment Plant Laboratory for testing.

				Residual Chlorir	ne Test		-

2.5 Inflatable Dams

DC WATER operates and maintains twelve inflatable dams at eight different locations. The structure number, location and number of dams per site are presented in Table 2-10. The inflatable dams consist of multi-ply elastomeric (i.e., "rubber") fabric dams installed in major overflow conduits within the combined sewer system. The objective of the inflatable dam installation is to increase the effective depth to which the sewage must rise in the combined sewer before overflows occur. The effect of the installation is to retain a greater volume of combined sewage flow resulting from low to moderate intensity storms by maximizing storage within the CSS. During higher intensity storms, when the full carrying capacity of the overflow conduit is required to prevent upstream flooding, the dam is deflated automatically. Inflatable dam operations are summarized below:

Inflatable Dam		Was Dam Out of Service			Schedule to Restore to
Structure No	Date Inspected	During the Month?	Dates out of Service	Reason	Service
14 - East	3/20/2013	No	N/A	N/A	N/A

3. DRY WEATHER OVERFLOWS

There was no dry weather combined sewer overflow during March 2013.

Sanitary Sewer Overflows:

Location	1400 35 th Street, SE
	A DC Water foreman investigating a sewer odor complaint from the resident at 3601 Texas Ave, SE
	discovered a leaking sanitary manhole in a wooded section of Fort Davis Park adjacent to 1400 35 th St.,
Cause	SE. The waste seeped through the base of the manhole that had been exposed by stream erosion.
Date/ Time Discovered	March 13, 2013 at approximately 3:50 pm.
Action Taken	The crew applied quick setting concrete to stop the leak and seal the manhole.
Date/Time Discharge Ceased	March 14, 2013 at approximately 11:30 am.
Estimated Volume	Approximately 1,000 gallons.
Did Overflow Reach Receiving water?	Yes. Pope Branch a tributary The Anacostia River
	DC Water will secure the appropriate permits and have our contractor rehabilitate the manhole and protect
Action taken to prevent reoccurrence	the bank of the stream from further erosion

Location	1400 35 th Street, SE
	A DC Water Crew was attempting to repair the base of a sanitary manhole in a wooded area of Fort Davis
	Park adjacent to 1400 35 th St., SE. The instability of the streams bank, caused by weather erosion, led the
Cause	manhole stack to collapse spilling sanitary waste into Pope Branch.
Date/ Time Discovered	March 14, 2013 at approximately 3:30 pm.
	DC Water contractor Corinthian Construction cleared the debris and installed temporary piping through
Action Taken	the crumbled manhole to effectively stop all flow from the sanitary sewer.
Date/Time Discharge Ceased	March 14, 2013 at approximately 8:00 pm
Estimated Volume	Approximately 12,000 gallons.
Did Overflow Reach Receiving water?	Yes. Pope Branch a tributary The Anacostia River
	DC Water contractor Corinthian Construction will replace all defective pipes and will rebuild the manhole
	in accordance with DC Water standards and specifications. Further, we will place rip-rap along the banks
Action taken to prevent reoccurrence	of the stream to protect it from further erosion.

4. SOLIDS AND FLOATABLES CONTROL

4.1 Catch Basin Cleaning

4.2 BMP Demonstration Projects

DC WATER operates the following demonstration projects designed to remove solids and floatables from CSO prior to discharge.

- Netting system at CSO 018 to Anacostia River
- Bar Rack at CSO 040 and 041 to Rock Creek

Table 4-2BMP Demonstration Projects – Report

Facility Netting System CSO 018	Date Inspected 3/29/2013	<i>Condition</i> Good	Work Needed Change nets	Work performed Changed nets	Material Removed (CY) 150 pounds
Bar Rack CSO 040	3/5/2013	Good	None	Routine Cleaning	(1)
Bar Rack CSO 041	3/14/2013	Good	None	Routine Cleaning	(1)

Notes:

(1) System is designed such that captured solids and floatable are conveyed to Blue Plains for treatment.

4.3 Anacostia River Floating Debris Removal Program

This program was initiated in October 1992 to remove floating debris from Anacostia and Potomac Rivers on a routine basis. The program has continued from that time and is now under the auspices of DC WATER, Department of Sewer Services. The floating debris removal program utilizes a skimmer boat and support boats to remove floatable debris from the Rivers as well as trash, which accumulates on the riverbanks and in the mud flats at low tides. Work for the most part is directed toward the Anacostia River. The boats pick up debris five days a week. Operations are summarized as follows:

Program Operation	5-day work week, excluding holidays, weather permitting
Work Days this month:	21
Days not Operating	14
Reason not Operating	High winds, low tide, and PM/repair service.
# Skimmer in Fleet	3 skimmers
# Skimmers Out of Service	1
Dates	B29: 3/1 - 3/31
Reason	B29: hydraulic oil leak in both propulsion pods.
Plan to Restore to Service	B29: at Gates Marina for repairs - ASAP.
Volume Material Collected	50 tons.
Nature of Material	Bottles, cans, natural debris and plastics.

Table 4-3 Anacostia River Floating Debris Removal Program – Summary

4.4 CSS Litter Control

This section describes DC WATER's efforts to coordinate litter control efforts with the National Park Service and D.C. Department of Public Works to maximize litter control efforts in the combined sewer system.

Status: no activities this month.

5. MONITORING

5.1 Condition Report Bar Racks at Main and O Street Storm Pumps

DC Water performs visual surveys of the bar racks at Main and O Street Pumping Stations to characterize the quantity and nature of floatable discharge. The physical condition of the bar racks and any maintenance requirements are also noted.

Table 5.1Bar Racks at Main & O Street Pumping Stations

Inspector: Claude Price
