

Biosolids Resource Recovery Monthly Report

NUTRIENTS and CARBON RECYCLING

FARMING

Provides carbon and nutrients valued at \$300.00 per acre.

SILVICULTURE

Increases yield and improves understorey.

RECLAMATION

Restoring mines to their natural state and providing wildlife habitats.

URBAN RESTORATION

Grow trees and reduce runoff.

BLUE PLAINS ADVANCED WASTEWATER TREATMENT PLANT: A RESOURCE RECOVERY FACILITY

water • nutrients • carbon • energy

dcwater.com/biosolids

GREEN ENERGY BIORENEWABLES

POWER FROM THE PEOPLE

THERMAL HYDROLYSIS PROCESS (THP) AND DIGESTION FACILITY

DC Water will be the first in North America to use thermal hydrolysis for wastewater treatment. When completed, this facility will be the largest plant of its kind in the world.

GREEN BENEFITS:

- Produce combined heat and power, generating 13 MW of electricity
- Save DC Water \$10 million annually cutting grid demand by a third (DC Water is the largest consumer of electricity in the District)
- Reduce carbon emissions by approximately 50,000 metric tons of CO₂e per year.
- Reduce trucking by 1.7 million miles per year.
- Save \$10 million in biosolids trucking costs
- Produce Class A biosolids to grow trees, sequester carbon and reduce runoff.

DC Water

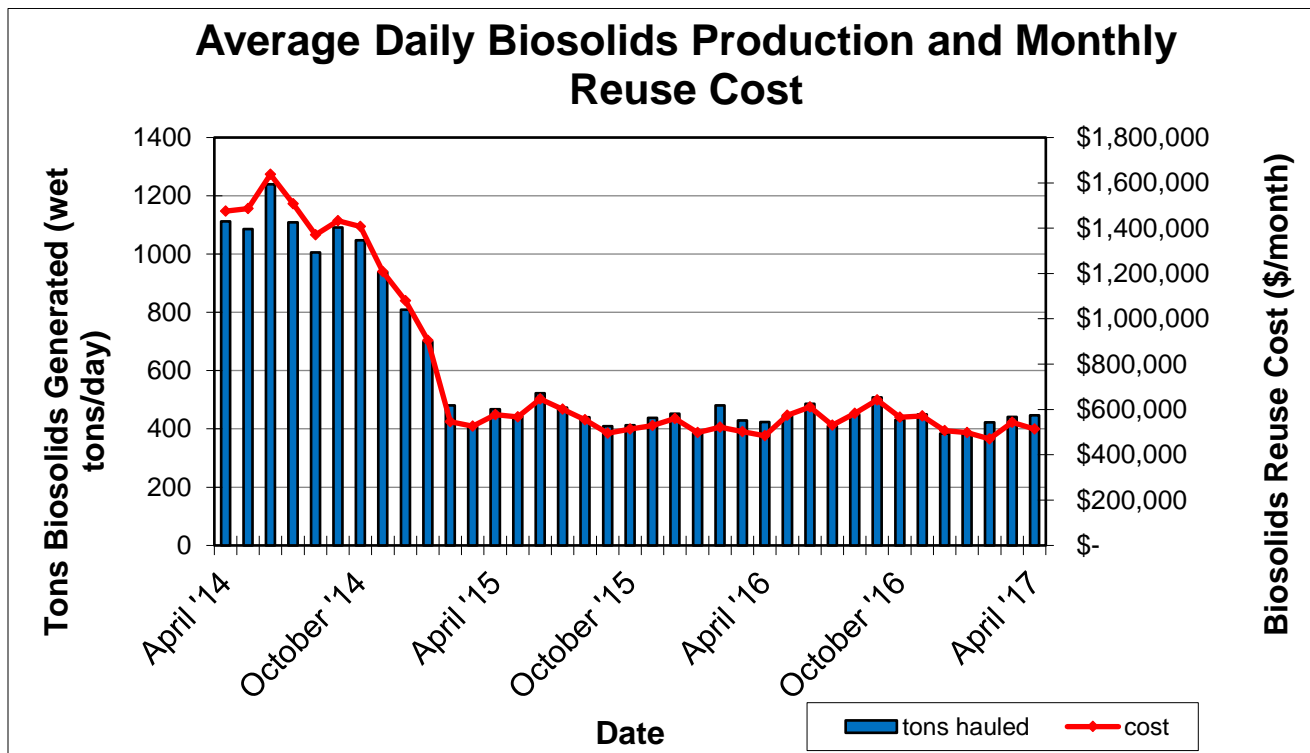

Resource Recovery Division
 5000 Overlook Ave, SW
 Washington, DC 20032
 (202)787-4929

The mission of the DC Water Resource Recovery Program is to provide reliable, diversified, flexible, sustainable, environmentally sound, publically acceptable and cost-effective reuse of the Biosolids assets produced by the Blue Plains Resource Recovery Plant while helping preserve agriculture and protect the Chesapeake Bay

RESOURCE RECOVERY – April 2017

In March, biosolids hauling averaged 446 wet tons per day (wtpd). The average percent solids for the Class A material was 30.3%. The graph below shows average daily biosolids produced and the associated monthly cost for reuse (transportation and application cost) for a three-year period ending April 2017. In April, diesel prices averaged \$2.77/gallon, and with the contractual fuel surcharge, the weighted average biosolids reuse cost (taking into account the marketed material) was \$38.80 per wet ton.

The average quantities of Class A biosolids transported and applied on farms by the two major contracts (WSSC’s Recyc and DC Water’s Nutriblend) and the quantities marketed as Bloom are shown on the graph below. In April, 676 wet tons of Bloom were distributed to 9 different customers.

Product Quality

All biosolids produced during the month of March met Class A Exceptional Quality (EQ) requirements required by EPA.

The graph below shows the EPA regulated heavy metals average concentrations in the Class A biosolids. The concentrations are considerably below the regulated exceptional quality limits (EPA-503 Exceptional Quality Limits) and the national average (EPA-2009 Survey Average).

The graph below shows both Vector Attraction Reduction (VAR) and Fecal Coliform (FC) results in the Class A product, both of which are required to maintain the Class A Exceptional Quality (EQ) status. Vector Attraction Reduction is measured by the reduction in Volatile Solids (VS) or organic compounds that may be odorous and attract nuisance vectors such as flies and rodent. DC Water anaerobic digesters reduced VS by over 65 percent, well above the required 38 percent minimum. In addition, the graph shows fecal coliforms levels in the Class A product. Fecal coliforms are indicators of disease causing organism (pathogens), and must be below 1,000 MPN/g to meet Class A standards. The FC levels in the Class A product are two or three orders of magnitude less than the maximum allowable level.

Bloom Marketing

Bloom sales eclipsed the 2000 ton total for the year, with sales to a new large nursery and garden center in MD. This partner is interested in serving as a distributor for Bloom, selling it under the Bloom name and helping to promote its use.

Distribution and Marketing Permit Update

Currently, the Bloom program possesses permits to distribute and market Bloom in Washington DC, Maryland, and Pennsylvania. Staff is working with Maryland Department of Environment (MDE) to obtain a letter of authorization for potential soil blenders, a requirement for their use of biosolids products. The requirement is simply for “written authorization” from MDE, but it is unclear what is required to obtain “written authorization”. Staff is meeting with MDE to determine this and develop a template for soil blenders. The application for the Virginia distribution and marketing permit is submitted and under review by the Virginia Department of Environmental Quality. Receipt of the final draft permit is expected by summer of this year.
