### DISTRICT OF COLUMBIA WATER AND SEWER AUTHORITY Washington, D.C.

### Monthly Operations Report for Combined Sewer System Month: July 2018

### **Table of Contents**

### 1. INTRODUCTION

### 2. OPERATION AND MAINTENANCE

- 2.1 Regulators
- 2.2 Outfalls, Tide Gates and CSO Signs
- 2.3 Pumping Stations
- 2.4 Inflatable Dams and SCADA Systems

### 3. DRY WEATHER OVERFLOWS

### 4. SOLIDS AND FLOATABLES CONTROL

- 4.1 Catch Basin Cleaning
- 4.2 BMP Demonstration for Solid and Floatable Control
- 4.3 Anacostia River Floating Debris Removal Program
- 4.4 CSS Litter Control

### 5. MONITORING

- 5.1 Bar Racks at Main & O Street
- 5.2 Rainfall Data
- 5.3 Wet Weather Overflows

### 1. INTRODUCTION

The District of Columbia Water and Sewer Authority (DC Water) operates a wastewater collection system comprised of separate and combined sewers. Separate storm and sanitary sewers serve two-thirds of the District. In the combined sewer system (CSS), there is a single sewer to convey storm water and sanitary wastes. The area served by combined sewers comprises about one-third of the District.

During dry weather, sanitary wastes collected in the CSS are conveyed to the DC Water's advanced wastewater treatment plant at Blue Plains (BPAWWTP or the Blue Plains AWWTP). During periods of rainfall, the capacity of a combined sewer may be exceeded and the excess flow, which is a mixture of storm water and sanitary wastes, is discharged directly to the Anacostia River, Rock Creek or the Potomac River or their tributary waters. This report summarizes the operations of the combined sewer system for the month indicated.

### 2. OPERATION AND MAINTENANCE

### 2.1 Regulators

Regulators divert combined sewage to interceptors, which convey flow to BPAWWTP for treatment. When flows exceed the capacities of the systems such as during significant rain events, regulators divert excess flow to the tunnel system for temporary storage, and CSO outfalls which discharge to receiving waters. The following table summarizes inspections of CSO regulators in the collection system.

Table 2-1 Regulator Structures

### **2.3.1 Pumping Stations**

Pumping station operations are summarized in the table below.

Table 2-3

**Pumping Stations – Inspections and Equipment in Service** 

Pumping	No. of	No.	No.	Screens or Pumps	-		Work Order	
Station	Inspections	Screens	Pumps	Out of Service	Dates	Reason	Number	Schedule to Restore to Service
Main	31	3	4	None	1	-	-	-
Eastside	1	2	4	Screen # 1		Bent Rake, Screen Not Running		Anticipated 11/30/18. Capital improvement project was developed to replace screen. Awaiting delivery of screen.
Poplar Point	1	2	4	Screen # 1		Mechanical Wiper Blade Failure	-	Anticipated 08/15/18. DC Water's construction contractor to perform repair.
Potomac	31	4	5	Screen # 2	07/01/18-07/31/18	Bent Scraper	18-400210	Anticipated 08/31/18. Screen is awaiting repair by vendor.

Notes:

Rock Creek	07/05/18	Group A	18-431063	Add oil, grease bearings and replace packing if needed.
Upper Anacostia	07/02/18	Group A	18-421898	Add oil, grease bearings and replace packing if needed.
Earl Place	07/18/18	Group A	18-458553	Add oil, grease bearings and replace packing if needed.
1st Street Tunnel Dewatering	07/21/18	Group B	18-572588	

1. Group A consists of:

Exercise bar screens

Exercise all sump pumps

Drain condensation from air compressor storage tank

Check depth of screening in the screen room and schedule Vactor truck as required

Check all safety equipment

Issue work order requests as required

- 2. Group B consists of:
  - a. Inspect and manually run CSO Pumps
  - b. Generator:
    - i. Inspection operation and test, inspect oil level, inspect coolant level
  - c. MCC:
    - i. Test gas monitoring system
    - ii. Inspect and test level indicators
  - d. Valve Vault
    - i. Lubricate knife gate valve stem and stem nut
    - ii. Flush air and vacuum release valve
- 3. DC Water's construction contractor is performing inspection and maintenance activities as part of completion of punch list and closeout activities for Poplar Point Pumping Station

Table 2-5

				07/23/18	0.45
				07/25/18	0.45
				07/29/18	0.05

- 1. Screenings collected from the Main and O Street Pumping Stations are combined from the sanitary flow and combined sewer overflows, due to the design of the screening system that consists of vertical trash racks, with no mechanical cleaning. Therefore, quantification of captured screening materials, specifically from combined sewer overflows, is not feasible.
- 2. Flow meters have been installed in accordance with NPDES Permit No. DC002199 to record CSO discharges from Main and O Street Pumping Stations. This data is reported via Discharge Monitoring Reports submitted to the EPA on a monthly basis. A summary of metered and modeled CSO discharges is included in Section 5.

### 2.4 Inflatable Dams and SCADA System

DC Water operates and maintains nine inflatable dams at seven different locations. Table 2-6 summarizes the date(s) the inflatable dams were inspected, and their operational status and condition. The inflatable dams consist of multi-ply elastomeric (i.e., "rubber") fabric dams installed in major overflow conduits within the combined sewer system. The objective of the inflatable dam installation is to increase the effective depth to which the sewage must rise in the combined sewer before overflows occur. The effect of the installation is to retain a greater volume of combined sewage flow resulting from low to moderate intensity storms by maximizing storage within the CSS. During higher intensity storms, when the full carrying capacity of the overflow conduit is required to prevent upstream flooding, the dam is deflated automatically. Inflatable dam operations are summarized below:

Table 2-6
Inflatable Dams – Inspections and Equipment in Service

Inflatable Dam		Was Dam Out of Service			
Structure No	Date Inspected	During the Month?	Dates out of Service	Reason	Schedule to Restore to Service

1. The number of catch basins in our service area changes with the ongoing connections and abandonments to the sewer infrastructure.

### 4.2 BMP Demonstration for Solid and Floatable Control

DC WATER operates the following demonstration projects designed to remove solids and floatables from CSO prior to discharge.

- Netting system at CSO 018 to Anacostia River
- Bar Rack at CSO 040 and 041 to Rock Creek

Table 4-2 BMP Demonstration Projects – Report

Facility	Date Inspected	Condition	Work Needed	Work performed	Material Removed (LB)
Netting System CSO 018	07/06/18	Good	Routine cleaning	Routine cleaning	None
	07/18/18	Good	Routine cleaning	Routine cleaning	None
Bar Rack CSO 040	07/02/18	Good	None	Routine Cleaning	(1)
Bar Rack CSO 041	07/19/18	Good	None	Routine Cleaning	(1)

### Notes:

(1) System was designed so that captured solids and floatable are conveyed to Blue Plains for treatment.

### 4.3 Anacostia River Floating Debris Removal Program

This program was initiated in October 1992 to remove floating debris from Anacostia and Potomac Rivers on a routine basis. The program has continued from that time and is now under the auspices of DC WATER, Department of Sewer Services. The floating debris removal program utilizes a skimmer boat and support boats to remove floatable debris from the Rivers as well as trash, which accumulates on the riverbanks and in the mud flats at low tides. Work for the most part is directed toward the Anacostia River. The boats pick up debris five days a week. Operations are summarized as follows:

Table 4-3 Anacostia River Floating Debris Removal Program – Summary

Program Operation	5-day work week, excluding holidays, weather permitting
Work Days this month:	21
Days not Operating	3
Reason not Operating	Maintenance, wind, low water levels, lightning.
# Skimmer in Fleet	4 Skimmers
# Skimmers Out of Service	1 Skimmer (on the last day of the month)
Dates	B33: 7/1 to 7/12 and B34 7/13 to 7/31
Reason	B33: Hydraulic oil leaks. B34: Port wing bracket broken.
Plan to Restore to Service	B33 returned to service on 7/13. B34 ETR unknown.
Amount Material Collected	80 tons this month. Calendar year to date 550 tons.
Nature of Material	Bottles, cans, natural debris and plastics.

### 4.4 CSS Litter Control

This section describes DC WATER's efforts to coordinate litter control efforts with the National Park Service and D.C. Department of Public Works to maximize litter control efforts in the combined sewer system.

Status: no activities this month.

### 5. MONITORING

### 5.1 Condition Report Bar Racks at Main and O Street Storm Pumps

DC Water performs visual surveys of the bar racks at Main and O Street Pumping Stations to characterize the quantity and nature of floatable discharge. The physical condition of the bar racks and any maintenance requirements are also noted.

### Table 5-1 Bar Racks at Main & O Street Pumping Stations

Inspector: Keith Watts

		Data	Condition		Work Order		Work Performed or

# DISTRICT OF COLUMBIA WATER AND SEWER AUTHORITY

Serving the Public • Protecting the Environment

### Monthly Operations Report For Combined Sewer System

Month: August 2018

### **Prepared By:**

District of Columbia
Water and Sewer Authority
Department of Sewer Services
Washington, D.C. 20003

### DISTRICT OF COLUMBIA WATER AND SEWER AUTHORITY Washington, D.C.

### Monthly Operations Report for Combined Sewer System Month: August 2018

### **Table of Contents**

### 1. INTRODUCTION

### 2. OPERATION AND MAINTENANCE

- 2.1 Regulators
- 2.2 Outfalls, Tide Gates and CSO Signs
- 2.3 Pumping Stations
- 2.4 Inflatable Dams and SCADA Systems

### 3. DRY WEATHER OVERFLOWS

### 4. SOLIDS AND FLOATABLES CONTROL

- 4.1 Catch Basin Cleaning
- 4.2 BMP Demonstration for Solid and Floatable Control
- 4.3 Anacostia River Floating Debris Removal Program
- 4.4 CSS Litter Control

### 5. MONITORING

- 5.1 Bar Racks at Main & O Street
- 5.2 Rainfall Data
- 5.3 Wet Weather Overflows

### 1. INTRODUCTION

The District of Columbia Water and Sewer Authority (DC Water) operates a wastewater collection system comprised of separate and combined sewers. Separate storm and sanitary sewers serve two-thirds of the District. In the combined sewer system (CSS), there is a single sewer to convey storm water and sanitary wastes. The area served by combined sewers comprises about one-third of the District.

During dry weather, sanitary wastes collected in the CSS are conveyed to the DC Water's advanced wastewater treatment plant at Blue Plains (BPAWWTP or the Blue Plains AWWTP). During periods of rainfall, the capacity of a combined sewer may be exceeded and the excess flow, which is a mixture of storm water and sanitary wastes, is discharged directly to the Anacostia River, Rock Creek or the Potomac River or their tributary waters. This report summarizes the operations of the combined sewer system for the month indicated.

### 2. OPERATION AND MAINTENANCE

### 2.1 Regulators

Regulators divert combined sewage to interceptors, which convey flow to BPAWWTP for treatment. When flows exceed the capacities of the systems such as during significant rain events, regulators divert excess flow to the tunnel system for temporary storage, and CSO outfalls which discharge to receiving waters. The following table summarizes inspections of CSO regulators in the collection system.

Table 2-1 Regulator Structures

				Со	ndition

- 1. Noted structures no longer function as a combined sewer overflow regulator structure.
- 2. Structure 24a is being used for bypass pumping to support work on East Side Force Main. The force main work is necessary for the construction of the Northeast Boundary Tunnel. Anticipated completion date November 2018. During the bypass pumping operation, DC Water will be unable to perform a direct inspection, Structure 24a will be monitored via indirect monitoring of downstream flows to determine that the structure is operating properly.

### 2.2 Outfalls, Tide Gates and CSO Signs

The following table summarizes inspections, maintenance and work performed on outfall structures, tide gates and CSO signs in the collection system.

1. Outfall no longer functions as a combined sewer outfall.

### 2.3.1 Pumping Stations

Pumping station operations are summarized in the table below.

Table 2-3

**Pumping Stations – Inspections and Equipment in Service** 

Pumping	No. of	No.	No.	Screens or Pumps			Work Order	
Station	Inspections	Screens	Pumps	Out of Service	Dates	Reason	Number	Schedule to Restore to Service
Main	31	3	4	None	-	-	ı	-
Eastside <sup>1</sup>	1	2	4	Screen # 1		Bent Rake, Screen Not Running		Anticipated 11/30/18. Capital improvement project was developed to replace screen. Awaiting delivery of screen.
Poplar Point	1	2	4	Screen #1		Mechanical Wiper Blade Failure	-	Returned to service 08/07/18
Potomac <sup>2,3</sup>	31	4	5	Screen # 2	08/01/18 - 08/03/18	Bent Scraper	18-400210	Returned to full service 08/03/18.

### Notes:

- 1. Eastside pumping station taken out of service 08/23/2018 11/15/18 for work on the downstream East Side Force Main. The force main work is necessary for the construction of the Northeast Boundary Tunnel. A bypass pumping operation at Structure 24a is redirecting the flow to Main Pumping Station.
- 2. On August 2, and August 7, pumps 1, 2, and 3 at the Potomac Pumping Station experienced high vibration levels which reduced the pump capacity.
- 3. On August 21, pumps 1 and 3 at the Potomac Pumping Station experienced high vibration levels which reduced the pump capacity.

Table 2-4
Pumping Stations – Preventive Maintenance

	Date	Type of Preventive Maintenance	Work Order						
Pumping Station	Performed	$Performed^{1}$	Number	Comments					
Main	08/02/18	Group A	18-484422	Add oil, grease bearings and replace packing if needed.					
O St	08/23/18	Group A	18-561767	Add oil, grease bearings and replace packing if needed.					
Eastside	08/09/18	Group A	18-506331	Add oil, grease bearings and replace packing if needed.					
Poplar Point	See Note 3	See Note 3							
Potomac	08/09/18	Group A	18-506628	Add oil, grease bearings and replace packing if needed.					
Rock Creek	08/03/18	Group A	18-484436	Add oil, grease bearings and replace packing if needed.					
Upper Anacostia	08/02/18	Group A	18-484450	Add oil, grease bearings and replace packing if needed.					
Earl Place	08/20/18	Group A	18-515241	Add oil, grease bearings and replace packing if needed.					
1st Street Tunnel Dewatering	08/25/18	Group B	18-620143						

1. Group A consists of:

Exercise bar screens

Exercise all sump pumps

Drain condensation from air compressor storage tank

Check depth of screening in the screen room and schedule Vactor truck as required

Check all safety equipment

Issue work order requests as required

- 2. Group B consists of:
  - a. Inspect and manually run CSO Pumps
  - b. Generator:
    - i. Inspection operation and test, inspect oil level, inspect coolant level
  - c. MCC:
    - i. Test gas monitoring system
    - ii. Inspect and test level indicators
  - d. Valve Vault
    - i. Lubricate knife gate valve stem and stem nut
    - ii. Flush air and vacuum release valve
- 3. DC Water's construction contractor is performing inspection and maintenance activities as part of completion of punch list and closeout activities for Poplar Point Pumping Station

Table 2-5
Pumping Stations – Pumpage

		-	umping stations i umpage

Potomac	5227.70	168.64	N/A	N/A	N/A	
Rock Creek	150.20	4.85	N/A	N/A	N/A	
Upper Anacostia	50.61	1.63	N/A	N/A	N/A	
Earl Place	0.2806	0.009	N/A	N/A	N/A	
1st Street Tunnel	N/A	N/A	N/A	08/07/18	0.16	
Dewatering				08/21/18	0.49	

- 1. Screenings collected from the Main and O Street Pumping Stations are combined from the sanitary flow and combined sewer overflows, due to the design of the screening system that consists of vertical trash racks, with no mechanical cleaning. Therefore, quantification of captured screening materials, specifically from combined sewer overflows, is not feasible.
- 2. Flow meters have been installed in accordance with NPDES Permit No. DC002199 to record CSO discharges from Main and O Street Pumping Stations. This data is reported via Discharge Monitoring Reports submitted to the EPA on a monthly basis. A summary of metered and modeled CSO discharges is included in Section 5.
- 3. Eastside pumping station taken out of service 08/23/2018 11/15/18 for work on the downstream East Side Force Main. The force main work is necessary for the construction of the Northeast Boundary Tunnel. A bypass pumping operation at Structure 24a is redirecting the flow to Main Pumping Station.

#### 2.4 Inflatable Dams and SCADA System

DC Water operates and maintains nine inflatable dams at seven different locations. Table 2-6 summarizes the date(s) the inflatable dams were inspected, and their operational status and condition. The inflatable dams consist of multi-ply elastomeric (i.e., "rubber") fabric dams installed in major overflow conduits within the combined sewer system. The objective of the inflatable dam installation is to increase the effective depth to which the sewage must rise in the combined sewer before overflows occur. The effect of the installation is to retain a greater volume of combined sewage flow resulting from low to moderate intensity storms by maximizing storage within the CSS. During higher intensity storms, when the full carrying capacity of the overflow conduit is required to prevent upstream flooding, the dam is deflated automatically. Inflatable dam operations are summarized below:

Table 2-6
Inflatable Dams – Inspections and Equipment in Service

Inflatable Dam		Was Dam Out of Service			
Structure No	Date Inspected	During the Month?	Dates out of Service	Reason	Schedule to Restore to Service
14 - East	08/09/18	No	N/A	N/A	N/A
14 - West	08/09/18	No	N/A	N/A	N/A

% Cleaned/Inspected to Date				98%	21%	69%	67%			80%	74%

1. The number of catch basins in our service area changes with the ongoing connections and abandonments to the sewer infrastructure.

## 4.2 BMP Demonstration for Solid and Floatable Control

DC WATER operates the following demonstration projects designed to remove solids and floatables from CSO prior to discharge.

- Netting system at CSO 018 to Anacostia River
- Bar Rack at CSO 040 and 041 to Rock Creek

Table 4-2 BMP Demonstration Projects – Report

Facility Netting System CSO 018	Date Inspected 08/09/18	Condition Good	Work Needed Routine cleaning	Work performed Routine cleaning	Material Removed (LB) None
Bar Rack CSO 040	08/10/18	Good	None	Routine Cleaning	(1)
Bar Rack CSO 041	08/16/18	Good	None	Routine Cleaning	(1)

#### Notes:

(1) System was designed so that captured solids and floatable are conveyed to Blue Plains for treatment.

### 4.3 Anacostia River Floating Debris Removal Program

This program was initiated in October 1992 to remove floating debris from Anacostia and Potomac Rivers on a routine basis. The program has continued from that time and is now under the auspices of DC WATER, Department of Sewer Services. The floating debris removal program utilizes a skimmer boat and support boats to remove floatable debris from the Rivers as well as trash, which accumulates on the riverbanks and in the mud flats at low tides. Work for the most part is directed toward the Anacostia River. The boats pick up debris five days a week. Operations are summarized as follows:

Table 4-3 Anacostia River Floating Debris Removal Program – Summary

Program Operation	5-day work week, excluding holidays, weather permitting
Work Days this month:	23
Days not Operating	6
Reason not Operating	Maintenance, wind, low water levels, lightning.
# Skimmer in Fleet	4 Skimmers
# Skimmers Out of Service	1 Skimmer (on the last day of the month)
Dates	B34: 8/1 to 8/31
Reason	B34: Port wing bracket broken.
Plan to Restore to Service	B34: At vendor for repair. ETR unknown.
Amount Material Collected	90 tons this month. Calendar year to date 640 tons.
Nature of Material	Bottles, cans, natural debris and plastics.

#### 4.4 CSS Litter Control

This section describes DC WATER's efforts to coordinate litter control efforts with the National Park Service and D.C. Department of Public Works to maximize litter control efforts in the combined sewer system.

Status: no activities this month.

# 5. MONITORING

# 5.1 Condition Report Bar Racks at Main and O Street Storm Pumps

DC Water performs visual surveys of the bar racks at Main and O Street Pumping Stations to characterize the quantity and nature of floatable discharge. The physical condition of the bar racks and any maintenance requirements are also noted.

# Table 5-1 Bar Racks at Main & O Street Pumping Stations

Inspector: Keith Watts

		Data	Cond	lition	Work Order		Work Performed or
<b>Pumping Station</b>	Inspector	Date Inspected	Good	Needs Work	Number	Work Needed	Schedule for Completion

# Monthly Operations Report for Combined Sewer System Month: September 2018

#### **Table of Contents**

#### 1. INTRODUCTION

## 2. OPERATION AND MAINTENANCE

- 2.1 Regulators
- 2.2 Outfalls, Tide Gates and CSO Signs
- 2.3 Pumping Stations
- 2.4 Inflatable Dams and SCADA Systems

#### 3. DRY WEATHER OVERFLOWS

## 4. SOLIDS AND FLOATABLES CONTROL

- 4.1 Catch Basin Cleaning
- 4.2 BMP Demonstration for Solid and Floatable Control
- 4.3 Anacostia River Floating Debris Removal Program
- 4.4 CSS Litter Control

#### 5. MONITORING

- 5.1 Bar Racks at Main & O Street
- 5.2 Rainfall Data
- 5.3 Wet Weather Overflows

#### 1. INTRODUCTION

The District of Columbia Water and Sewer Authority (DC Water) operates a wastewater collection system comprised of separate and combined sewers. Separate storm and sanitary sewers serve two-thirds of the District. In the combined sewer system (CSS), there is a single sewer to convey storm water and sanitary wastes. The area served by combined sewers comprises about one-third of the District.

During dry weather, sanitary wastes collected in the CSS are conveyed to the DC Water's advanced wastewater treatment plant at Blue Plains (BPAWWTP or the Blue Plains AWWTP). During periods of rainfall, the capacity of a combined sewer may be exceeded and the excess flow, which is a mixture of storm water and sanitary wastes, is discharged directly to the Anacostia River, Rock Creek or the Potomac River or their tributary waters. This report summarizes the operations of the combined sewer system for the month indicated.

#### 2. OPERATION AND MAINTENANCE

## 2.1 Regulators

Regulators divert combined sewage to interceptors, which convey flow to BPAWWTP for treatment. When flows exceed the capacities of the systems such as during significant rain events, regulators divert excess flow to the tunnel system for temporary storage, and CSO outfalls which discharge to receiving waters. The following table summarizes inspections of CSO regulators in the collection system.

Table 2-1 Regulator Structures

- 1. Noted structures no longer function as a combined sewer overflow regulator structure.
- 2. Structure 24a is being used for bypass pumping to support work on East Side Force Main. The force main work is necessary for the construction of the Northeast Boundary Tunnel. Anticipated completion date November 2018. During the bypass pumping operation, DC Water will be unable to perform a direct inspection, Structure 24a will be monitored via indirect monitoring of downstream flows to determine that the structure is operating properly.

# 2.2 Outfalls, Tide Gates and CSO Signs

The following table summarizes inspections, maintenance and work performed on outfall structures, tide gates and CSO signs in the collection system.

<sup>1.</sup> Outfall no longer functions as a combined sewer outfall.

## 2.3.1 Pumping Stations

Pumping station operations are summarized in the table below.

Table 2-3

**Pumping Stations – Inspections and Equipment in Service** 

Pumping	No. of	No.	No.	Screens or Pumps			Work Order	
Station	Inspections	Screens	Pumps	Out of Service	Dates	Reason	Number	Schedule to Restore to Service
Main	30	3	4	Screen #2	09/27/18 - 09/30/18	Gear Box Failure	18-651934	Anticipated 11/30/18. New gear box has been ordered.
Eastside <sup>1</sup>	1	2	4	Screen # 1		Bent Rake, Screen Not Running		Anticipated 11/30/18. Capital improvement project was developed to replace screen. Awaiting delivery of screen.
Poplar Point	1	2	4	None	-	-	-	-
Potomac <sup>2</sup>	30	4	5	None	-	_	-	-

- 1. Eastside pumping station taken out of service 08/23/2018 11/15/18 for work on the downstream East Side Force Main. The force main work is necessary for the construction of the Northeast Boundary Tunnel. A bypass pumping operation at Structure 24a is redirecting the flow to Main Pumping Station.
- 2. On September 28, pumps 1 and 3 at the Potomac Pumping Station experienced high vibration levels which reduced the pump capacity.

Table 2-4
Pumping Stations – Preventive Maintenance

	Date	Type of Preventive Maintenance	Work Order				
Pumping Station	Performed	$Performed^{l}$	Number	Comments			
Main	09/03/18	Group A	18-533097	Add oil, grease bearings and replace packing if needed.			
O St	09/24/18	Group A	18-622764	Add oil, grease bearings and replace packing if needed.			
Eastside	09/10/18	Group A	18-540775	Add oil, grease bearings and replace packing if needed.			
Poplar Point	See Note 3	See Note 3					
Potomac	09/10/18	Group A	18-541150	Add oil, grease bearings and replace packing if needed.			
Rock Creek	09/03/18	Group A	18-533111	Add oil, grease bearings and replace packing if needed.			
Upper Anacostia	09/03/18	Group A	18-533125	Add oil, grease bearings and replace packing if needed.			
Earl Place	09/20/18	Group A	18-576919	Add oil, grease bearings and replace packing if needed.			
1st Street Tunnel Dewatering	09/29/18	Group B	19-36115				

1. Group A consists of:

Exercise bar screens

Exercise all sump pumps

Drain condensation from air compressor storage tank

Check depth of screening in the screen room and schedule Vactor truck as required

Check all safety equipment

Issue work order requests as required

- 2. Group B consists of:
  - a. Inspect and manually run CSO Pumps
  - b. Generator:
    - i. Inspection operation and test, inspect oil level, inspect coolant level
  - c. MCC:
    - i. Test gas monitoring system
    - ii. Inspect and test level indicators
  - d. Valve Vault
    - i. Lubricate knife gate valve stem and stem nut
    - ii. Flush air and vacuum release valve
- 3. DC Water's construction contractor is performing inspection and maintenance activities as part of completion of punch list and closeout activities for Poplar Point Pumping Station

Table 2-5
Pumping Stations – Pumpage

	Sanitary Pumpage		Screenings Collected (tons) <sup>1</sup>	Pumpage of CSO from First Street Tunnel back to Sewer System		
Pumping Station	Total Wastewater	Daily Average Wastewater		Date	Volume (mg)	
Main <sup>1,2</sup>	(mg) 2098.66	(mg) 69.96	N/A	N/A	N/A	
O St <sup>1,2</sup>	193.59	6.45	N/A	N/A	N/A	
Eastside <sup>3</sup>	0.00	0.00	N/A	N/A	N/A	
Poplar Point	379.21	12.64	N/A	N/A	N/A	
Potomac	5547.73	184.92	N/A	N/A	N/A	
Rock Creek	186.92	6.23	N/A	N/A	N/A	
Upper Anacostia	50.20	1.67	N/A	N/A	N/A	
Earl Place	0.3198	0.011	N/A	N/A	N/A	
1st Street Tunnel	N/A	N/A	N/A	09/05/18	0.18	
Dewatering				09/06/18	0.08	
				09/07/18	0.63	
				09/08/18	1.62	
				09/11/18	0.16	
				09/18/18	1.51	
				09/26/18	0.16	

- 1. Screenings collected from the Main and O Street Pumping Stations are combined from the sanitary flow and combined sewer overflows, due to the design of the screening system that consists of vertical trash racks, with no mechanical cleaning. Therefore, quantification of captured screening materials, specifically from combined sewer overflows, is not feasible.
- 2. Flow meters have been installed in accordance with NPDES Permit No. DC002199 to record CSO discharges from Main and O Street Pumping Stations. This data is reported via Discharge Monitoring Reports submitted to the EPA on a monthly basis. A summary of metered and modeled CSO discharges is included in Section 5.
- 3. Eastside pumping station taken out of service 08/23/2018 11/15/18 for work on the downstream East Side Force Main. The force main work is necessary for the construction of the Northeast Boundary Tunnel. A bypass pumping operation at Structure 24a is redirecting the flow to Main Pumping Station.

### 2.4 Inflatable Dams and SCADA System

DC Water operates and maintains nine inflatable dams at seven different locations. Table 2-6 summarizes the date(s) the inflatable dams were inspected, and their operational status and condition. The inflatable dams consist of multi-ply elastomeric (i.e., "rubber") fabric dams installed in major overflow conduits within the combined sewer system. The objective of the inflatable dam installation is to increase the effective depth to which the sewage must rise in the combined sewer before overflows occur. The effect of the installation is to retain a greater volume of combined sewage flow resulting from low to moderate intensity storms by maximizing storage within the CSS. During higher intensity storms, when the full carrying capacity of the overflow conduit is required to prevent upstream flooding, the dam is deflated automatically. Inflatable dam operations are summarized below:

Table 2-6
Inflatable Dams – Inspections and Equipment in Service

Inflatable Dam		Was Dam Out of Service			
Structure No	Date Inspected	During the Month?	Dates out of Service	Reason	Schedule to Restore to Service
14 - East	09/27/18	No	N/A	N/A	N/A

% Cleaned/Inspected to Date				99%	31%	80%	74%			89%	89%

1. The number of catch basins in our service area changes with the ongoing connections and abandonments to the sewer infrastructure.

## 4.2 BMP Demonstration for Solid and Floatable Control

DC WATER operates the following demonstration projects designed to remove solids and floatables from CSO prior to discharge.

- Netting system at CSO 018 to Anacostia River
- Bar Rack at CSO 040 and 041 to Rock Creek

Table 4-2 BMP Demonstration Projects – Report

Facility Netting System CSO 018	Date Inspected 09/06/18	Condition Good	Work Needed Routine cleaning	Work performed Routine cleaning	Material Removed (LB) None
Bar Rack CSO 040	09/07/18	Good	None	Routine Cleaning	(1)
Bar Rack CSO 041	09/26/18	Good	None	Routine Cleaning	(1)

#### Notes:

(1) System was designed so that captured solids and floatable are conveyed to Blue Plains for treatment.

#### 4.3 Anacostia River Floating Debris Removal Program

This program was initiated in October 1992 to remove floating debris from Anacostia and Potomac Rivers on a routine basis. The program has continued from that time and is now under the auspices of DC WATER, Department of Sewer Services. The floating debris removal program utilizes a skimmer boat and support boats to remove floatable debris from the Rivers as well as trash, which accumulates on the riverbanks and in the mud flats at low tides. Work for the most part is directed toward the Anacostia River. The boats pick up debris five days a week. Operations are summarized as follows:

Table 4-3 Anacostia River Floating Debris Removal Program – Summary

Program Operation	5-day work week, excluding holidays, weather permitting
Work Days this month:	19
Days not Operating	7
Reason not Operating	Maintenance, wind, low water levels, lightning, flooding.
# Skimmer in Fleet	4 Skimmers
# Skimmers Out of Service	1 Skimmer (on the last day of the month)
Dates	B34: 9/1 to 9/30
Reason	B34: Port wing bracket broken.
Plan to Restore to Service	B34: At vendor for repair. ETR unknown.
Amount Material Collected	30 tons this month. Calendar year to date 670 tons.
Nature of Material	Bottles, cans, natural debris and plastics.

#### 4.4 CSS Litter Control

This section describes DC WATER's efforts to coordinate litter control efforts with the National Park Service and D.C. Department of Public Works to maximize litter control efforts in the combined sewer system.

#### Status:

October 2018, cleaning operations will begin.

September 17<sup>th</sup>, 2018, a notification from National Park Services was received reporting clogged drains, stormwater runoffs, and odors. The notification also requested for storm drain and main cleaning along the perimeter of White House:

1500 & 1600 Blks of H Street NW 400 thru 700 Blks of 15<sup>th</sup> Street NW 400 thru 700 Blks of 17<sup>th</sup> Street NW 700 Blk of Jackson Place NW 700 Blk of Madison Place NW 1500 & 1600 Blks of Pennsylvania Ave NW

# 5. MONITORING

# 5.1 Condition Report Bar Racks at Main and O Street Storm Pumps

DC Water performs visual surveys of the bar racks at Main and O Street Pumping Stations to characterize the quantity and nature of floatable discharge. The physical condition of the bar racks and any maintenance requirements are also noted.

# Table 5-1 Bar Racks at Main & O Street Pumping Stations

Inspector: Keith Watts

		Data	Condition		Work Order		Work Performed or
Pumping Station	Inspector	Date Inspected	Good	Needs Work	Number	Work Needed	Schedule for Completion
Bar Racks at O Street Storm Pumps (CSO 010)	KW	09/28/18	X		18-632172		
Bar Racks at Main Storm Pumps (CSO 011)	KW	09/28/18	X		18-632165		

Rain data from National Airport and from the rain gauges installed in the CSS are summarized below.

5.2

**Rain Data**
