DISTRICT OF COLUMBIA WATER AND SEWER AUTHORITY Washington, D.C.

Monthly Operations Report for Combined Sewer System Month: April 2021 Table of Contents

1. INTRODUCTION

2. OPERATION AND MAINTENANCE

- 2.1 Regulators
- 2.2 Outfalls, Tide Gates and CSO Signs
- 2.3 Pumping Stations
- 2.4 Inflatable Dams and SCADA Systems

3. DRY WEATHER OVERFLOWS

4. SOLIDS AND FLOATABLES CONTROL

- 4.1 Catch Basin Cleaning
- 4.2 BMP Demonstration for Solid and Floatable Control
- 4.3 Anacostia River Floating Debris Removal Program
- 4.4 CSS Litter Control

5. MONITORING

- 5.1 Bar Racks at Main & O Street
- 5.2 Rainfall Data
- 5.3 Wet Weather Overflows

1. INTRODUCTION

The District of Columbia Water and Sewer Authority (DC Water) operates a wastewater collection system comprised of separate and combined sewers. Separate storm and sanitary sewers serve two-thirds of the District. In the combined sewer system (CSS), there is a single sewer to convey storm water and sanitary wastes. The area served by combined sewers comprises about one-third of the District.

During dry weather, sanitary wastes collected in the CSS are conveyed to the DC Water's advanced wastewater treatment plant at Blue Plains (BPAWWTP or the Blue Plains AWWTP). During periods of rainfall, the capacity of a combined sewer may be exceeded and the excess flow, which is a mixture of storm water and sanitary wastes, is discharged directly to the Anacostia River, Rock Creek or the Potomac River or their tributary waters. This report summarizes the operations of the combined sewer system for the month indicated.

2. OPERATION AND MAINTENANCE

2.1 Regulators

Regulators divert combined sewage to interceptors, which convey flow to BPAWWTP for treatment. When flows exceed the capacities of the systems such as during significant rain events, regulators divert excess flow to the tunnel system for temporary storage, and CSO outfalls which discharge to receiving waters. The following table summarizes inspections of CSO regulators in the collection system.

Table 2-1 Regulator Structures

				Co	ndition		
Structure		Associated NPDES	Date		Needs

1. Outfall no longer functions as a combined sewer outfall.

2.3.1 Pumping Stations

Pumping station operations are summarized in the table below.

Table 2-3

Pumping Stations – Inspections and Equipment in Service

Pumping	No. of	No.	No.	Screens or Pumps			Work Order	
Station	Inspections	Screens	Pumps	Out of Service	Dates	Reason	Number	Schedule to Restore to Service
Main	30	3	4	None				
Eastside	1	2	4	None	-	-	-	-
Poplar Point	1	2	4	None	_	_	-	-
Potomac ¹	30	4	5	Screen #1	4/01/21 - 4/30/21	Bent rake and scraper bar, screen is off track.	20-675279	Anticipated 6/30/21. The screen has been disconnected for repair. Awaiting material from manufacturer.
				Pump #4	4/27/21 – 4/30/21	Oil leak from top bearing cover. Pump placed in LOTO. Valve needs to be repaired.	21-353940	Anticipated 5/31/21. Awaiting repair from contractor.

While one screen was out of service during the month of April 2021, firm pumping capacity was maintained by keeping the screening channel open to allow flow through to the pumps. Debris was manually removed as needed.

Table 2-4
Pumping Stations – Preventive Maintenance

		Tumping Stations Treventry		
	Date		Work Order	
Pumping Station	Performed	Type of Preventive Maintenance Performed 1,2	Number	Comments
Main	4/06/21	Group A	21-299083	Add oil, grease bearings and replace packing if needed.
O St	4/21/21	Group A	21-318777	Add oil, grease bearings and replace packing if needed.
Eastside	4/02/21	Group A	21-249318	Add oil, grease bearings and replace packing if needed.
Poplar Point	4/14/21	Group A	21-308288	Add oil, grease bearings and replace packing if needed.
Potomac	4/01/21	Group A	21-254981	Add oil, grease bearings and replace packing if needed.
Rock Creek	4/02/21	Group A	21-277863	Add oil, grease bearings and replace packing if needed.
Upper Anacostia	4/15/21	Group A	21-308351	Add oil, grease bearings and replace packing if needed.
Earl Place	4/20/21	Group A	21-272969	Add oil, grease bearings and replace packing if needed.
1st Street Tunnel Dewatering	4/27/21	Group B	21-375946	

- 1. Group A consists of:
 - a. Exercise bar screens
 - b. Exercise all sump pumps
 - c. Drain condensation from air compressor storage tank
 - d. Check depth of screening in the screen room and schedule Vactor truck as required
 - e. Check all safety equipment
 - f. Issue work order requests as required
- 2. Group B consists of:
 - a. Inspect and manually run CSO Pumps
 - b. Generator:
 - i. Inspection operation and test, inspect oil level, inspect coolant level
 - c. MCC:
 - i. Test gas monitoring system
 - ii. Inspect and test level indicators
 - d. Valve Vault
 - i. Lubricate knife gate valve stem and stem nut
 - ii. Flush air and vacuum release valve

Table 2-5
Pumping Stations – Pumpage

Rock Creek	174.77	5.83	N/A	N/A	N/A
Upper Anacostia	44.47	1.48	N/A	N/A	N/A
Earl Place	0.252	0.008	N/A	N/A	N/A
1 st Street Tunnel Dewatering	N/A	N/A	N/A	4/10/21 4/12/21 4/15/21 4/19/21 4/20/21 4/24/21	0.21 0.04 0.05 0.05 0.03 0.05

- 1. Screenings collected from the Main and O Street Pumping Stations are combined from the sanitary flow and combined sewer overflows, due to the design of the screening system that consists of vertical trash racks, with no mechanical cleaning. Therefore, quantification of captured screening materials, specifically from combined sewer overflows, is not feasible.
- 2. Flow meters have been installed in accordance with NPDES Permit No. DC002199 to record CSO discharges from Main and O Street Pumping Stations. This data is reported via Discharge Monitoring Reports submitted to the EPA on a monthly basis. A summary of metered and modeled CSO discharges is included in Section 5.

2.4 Inflatable Dams and SCADA System

DC Water operates and maintains nine inflatable dams at seven different locations. Table 2-6 summarizes the date(s) the inflatable dams were inspected, and their operational status and condition. The inflatable dams consist of multi-ply elastomeric (i.e., "rubber") fabric dams installed in major overflow conduits within the combined sewer system. The objective of the inflatable dam installation is to increase the effective depth to which the sewage must rise in the combined sewer before overflows occur. The effect of the installation is to retain a greater volume of combined sewage flow resulting from low to moderate intensity storms by maximizing storage within the CSS. During higher intensity storms, when the full carrying capacity of the overflow conduit is required to prevent upstream flooding, the dam is deflated automatically. Inflatable dam operations are summarized below:

Table 2-6
Inflatable Dams – Inspections and Equipment in Service

Inflatable Dam		Was Dam Out of Service			
Structure No	Date Inspected	During the Month?	Dates out of Service	Reason	Schedule to Restore to Service
14 - East	4/20/21	No	N/A	N/A	N/A
14 - West	4/20/21	No	N/A	N/A	N/A
15	4/20/21	Yes	4/22/21	See Note 1	4/22/21
15A	4/20/21	Yes	4/22/21	See Note 1	4/22/21
16 – East	4/20/21	No	N/A	N/A	N/A
16 – West	4/20/21	No	N/A	N/A	N/A
34	4/22/21	No	N/A	N/A	N/A
35	4/22/21	No	N/A	N/A	N/A
52	4/22/21	No	N/A	N/A	N/A

^{1.} On 4/22/21, Structures 15 and 15A were manually deflated to install new sensor equipment. This was not an overflow to the river as the upstream levels were significantly lower than the low-level threshold. The new sensor equipment was installed, and the structure was returned to service in less than 24 hours.

Table 2-7
Inflatable Dams & SCADA Sites - Wet Weather Operations

Inflatable Dam Structure No.	Overflow Dates	Estimated Duration of Overflow	Inflatable Dam Operational Status	
14 (E & W)	None	N/A	Inflated	
15	None	N/A	Inflated

Outfall Sewer Control Gate No.2	Operational	This structure has been bulk headed. Overflows are no longer possible		

3. DRY WEATHER OVERFLOWS

There was no dry weather combined sewer overflows reported during April 2021.

4. SOLIDS AND FLOATABLES CONTROL

4.1 Catch Basin Cleaning

The following tables summarize catch basin cleaning in the Anacostia CSO area and in the entire sewer system:

Table 4-1 Catch Basin Cleaning

				Inspections	7		Cleaning					
				Total	Total

to Date				0270	3 70					2070	170	

^{1.} The number of catch basins in our service area changes with the ongoing connections and abandonments to the sewer infrastructure.

^{2.} These are estimated counts from sewer maps until the existing Sewer Mobile APP for field data is updated and reprogrammed for use.

4.2 BMP Demonstration for Solid and Floatable Control

DC WATER operates the following demonstration projects designed to remove solids and floatables from CSO prior to discharge.

• Bar Rack at CSO 040 and 041 to Rock Creek

Table 4-2 BMP Demonstration Projects – Report

Facility	Date Inspected	Condition	Work Needed	Work performed	Material Removed (LB)
Bar Rack CSO 040	04/07/21	Good	None	Routine Cleaning	(1)
Bar Rack CSO 041	04/15/21	Good	None	Routine Cleaning	(1)

Notes:

(1) System was designed so that captured solids and floatables are conveyed to Blue Plains for treatment.

4.3 Anacostia River Floating Debris Removal Program

This program was initiated in October 1992 to remove floating debris from Anacostia and Potomac Rivers on a routine basis. The program has continued from that time and is now under the auspices of DC WATER, Department of Sewer Operations. The floating debris removal program utilizes a skimmer boat and support boats to remove floatable debris from the Rivers as well as trash, which accumulates on the riverbanks and in the mud flats at low tides. Work for the most part is directed toward the Anacostia River. The boats pick up debris five days a week. Operations are summarized as follows:

Table 4-3 Anacostia River Floating Debris Removal Program – Summary

Program Operation	5-day work week, excluding holidays, weather permitting
Work Days this month:	22
Days not Operating	7
Reason not Operating	Maintenance, wind, low water levels.
# Skimmer in Fleet	3 Skimmers
# Skimmers Out of Service	2 Skimmers
Dates	B32: 4/1 - 4/14. B33: 4/6 - 4/9.
Reason	B32: Electric wiring failure. B33: Bearing failure on number on
	screen.
Plan to Restore to Service	B32: Returned to operations on 4/15. B33 Returned to
	operations on 4/10.
Amount Material Collected	30 tons this month. Calendar year to date 125 tons.
Nature of Material	Bottles, cans, natural debris and plastics.

4.4 CSS Litter Control

This section describes DC WATER's efforts to coordinate litter control efforts with the National Park Service and D.C. Department of Public Works to maximize litter control efforts in the combined sewer system.

No Activity this month.

5. MONITORING

5.1 Condition Report Bar Racks at Main and O Street Storm Pumps

DC Water performs visual surveys of the bar racks at Main and O Street Pumping Stations to characterize the quantity and nature of floatable discharge. The physical condition of the bar racks and any maintenance requirements are also noted.

Table 5-1
Bar Racks at Main & O Street Pumping Stations

	Date	Cond	lition	Work Order		Work Performed or

- 2.3 Pumping Stations
- 2.4 Inflatable Dams and SCADA Systems

3. DRY WEATHER OVERFLOWS

4. SOLIDS AND FLOATABLES CONTROL

- 4.1 Catch Basin Cleaning
- 4.2 BMP Demonstration for Solid and Floatable Control
- 4.3 Anacostia River Floating Debris Removal Program
- 4.4 CSS Litter Control

5. MONITORING

- 5.1 Bar Racks at Main & O Street
- 5.2 Rainfall Data
- 5.3 Wet Weather Overflows

1. INTRODUCTION

The District of Columbia Water and Sewer Authority (DC Water) operates a wastewater collection system comprised of separate and combined sewers. Separate storm and sanitary sewers serve two-thirds of the District. In the combined sewer system (CSS), there is a single sewer to convey storm water and sanitary wastes. The area served by combined sewers comprises about one-third of the District.

During dry weather, sanitary wastes collected in the CSS are conveyed to the DC Water's advanced wastewater treatment plant at Blue Plains (BPAWWTP or the Blue Plains AWWTP). During periods of rainfall, the capacity of a combined sewer may be exceeded and the excess flow, which is a mixture of storm water and sanitary wastes, is discharged directly to the Anacostia River, Rock Creek or the Potomac River or their tributary waters. This report summarizes the operations of the combined sewer system for the month indicated.

2. OPERATION AND MAINTENANCE

2.1 Regulators

Regulators divert combined sewage to interceptors, which convey flow to BPAWWTP for treatment. When flows exceed the capacities of the systems such as during significant rain events, regulators divert excess flow to the tunnel system for temporary storage, and CSO outfalls which discharge to receiving waters. The following table summarizes inspections of CSO regulators in the collection system.

Table 2-1 Regulator Structures

				Co	ndition

1. Outfall no longer functions as a combined sewer outfall.

2.3.1 Pumping Stations

Pumping station operations are summarized in the table below.

Table 2-3
Pumping Stations – Inspections and Equipment in Service

Pumping	No. of	No.	No.	Screens or Pumps			Work Order	
	Inspections	Screens	Pumps	Out of Service	Dates	Reason	Number	Schedule to Restore to Service
Main	31	3	4	None	-	-	-	-
Eastside	1	2	4	None	-	-	-	-
Poplar Point	1	2	4	None	-	-	-	-
Potomac ¹	31	4	5	Screen #1	5/01/21 - 5/31/21	Bent rake and scraper bar, screen is off track.		Anticipated 6/30/21. The screen has been disconnected for repair. Repair is currently ongoing.
				Pump #4	5/01/21 - 5/07/21	Oil leak from top bearing cover. Pump placed in LOTO. Valve needs to be repaired.	21-353940	Returned to service 5/07/21. Valve was repaired.

^{1.} While one screen was out of service during the month of May 2021, firm pumping capacity was maintained by keeping the screening channel open to allow flow through to the pumps during wet weather events. Debris was manually removed as needed.

Table 2-4
Pumping Stations – Preventive Maintenance

Tumping Suntons Trevenure France										
	Date		Work Order							
Pumping Station	Performed	Type of Preventive Maintenance Performed 1,2	Number	Comments						
Main	5/1/21	Group A	21-338228	Add oil, grease bearings and replace packing if needed.						
O St	5/19/21	Group A	21-361109	Add oil, grease bearings and replace packing if needed.						
Eastside	5/12/21	Group A	21-298515	Add oil, grease bearings and replace packing if needed.						
Poplar Point	5/17/21	Group A	21-341261	Add oil, grease bearings and replace packing if needed.						
Potomac	5/1/21	Group A	21-308274	Add oil, grease bearings and replace packing if needed.						
Rock Creek	5/13/21	Group A	21-319983	Add oil, grease bearings and replace packing if needed.						
Upper Anacostia	5/12/21	Group A	21-341620	Add oil, grease bearings and replace packing if needed.						
Earl Place	5/7/21	Group A	21-316300	Add oil, grease bearings and replace packing if needed.						
1 st Street Tunnel Dewatering	5/31/21	Group B	21-382481							

- 1. Group A consists of:
 - a. Exercise bar screens
 - b. Exercise all sump pumps
 - c. Drain condensation from air compressor storage tank
 - d. Check depth of screening in the screen room and schedule Vactor truck as required
 - e. Check all safety equipment
 - f. Issue work order requests as required
- 2. Group B consists of:
 - a. Inspect and manually run CSO Pumps
 - b. Generator:
 - i. Inspection operation and test, inspect oil level, inspect coolant level
 - c. MCC:
 - i. Test gas monitoring system
 - ii. Inspect and test level indicators
 - d. Valve Vault
 - i. Lubricate knife gate valve stem and stem nut
 - ii. Flush air and vacuum release valve

				5/25/21	0.21							
				5/28/21	0.32							
				5/29/21	0.03							

- 1. Screenings collected from the Main and O Street Pumping Stations are combined from the sanitary flow and combined sewer overflows, due to the design of the screening system that consists of vertical trash racks, with no mechanical cleaning. Therefore, quantification of captured screening materials, specifically from combined sewer overflows, is not feasible.
- 2. Flow meters have been installed in accordance with NPDES Permit No. DC002199 to record CSO discharges from Main and O Street Pumping Stations. This data is reported via Discharge Monitoring Reports submitted to the EPA on a monthly basis. A summary of metered and modeled CSO discharges is included in Section 5.

2.4 Inflatable Dams and SCADA System

DC Water operates and maintains nine inflatable dams at seven different locations. Table 2-6 summarizes the date(s) the inflatable dams were inspected, and their operational status and condition. The inflatable dams consist of multi-ply elastomeric (i.e., "rubber") fabric dams installed in major overflow conduits within the combined sewer system. The objective of the inflatable dam installation is to increase the effective depth to which the sewage must rise in the combined sewer before overflows occur. The effect of the installation is to retain a greater volume of combined sewage flow resulting from low to moderate intensity storms by maximizing storage within the CSS. During higher intensity storms, when the full carrying capacity of the overflow conduit is required to prevent upstream flooding, the dam is deflated automatically. Inflatable dam operations are summarized below:

Table 2-6
Inflatable Dams – Inspections and Equipment in Service

Inflatable Dam	D	Was Dam Out of Service	D		
Structure No	Date Inspected	During the Month?	Dates out of Service	Reason	Schedule to Restore to Service
14 - East	5/19/21	No	N/A	N/A	N/A

35	5/13/21	No	N/A	N/A	N/A
52	5/13/21	No	N/A	N/A	N/A

^{1.} On 5/27/21, Structures 16 (E and W) deflated due to a high-level reading on the level sensor. Instrumentation personnel investigated the structure and noticed condensation on the level sensor. The level sensor was cleaned, the signal was stabilized, and the structure was returned to service in less than 24 hours. This was not an overflow to the river as the upstream levels were significantly lower than the low-level threshold.

Table 2-7
Inflatable Dams & SCADA Sites - Wet Weather Operations

Inflatable Dam Structure No.	Overflow Dates	Estimated Duration of Overflow	Inflatable Dam Operational Status
14 (E & W)	None	N/A	Inflated

^{1.} The number of catch basins in our service area changes with the ongoing connections and abandonments to the sewer infrastructure.

^{2.} These are estimated counts from sewer maps until the existing Sewer Mobile APP for field data is updated and reprogrammed for use.

4.2 BMP Demonstration for Solid and Floatable Control

DC WATER operates the following demonstration projects designed to remove solids and floatables from CSO prior to discharge.

• Bar Rack at CSO 040 and 041 to Rock Creek

Table 4-2 BMP Demonstration Projects – Report

Facility	Date Inspected	Condition	Work Needed	Work performed	Material Removed (LB)
Bar Rack CSO 040	05/07/21	Good	None	Routine Cleaning	(1)
Bar Rack CSO 041	05/25/21	Good	None	Routine Cleaning	(1)

Notes:

(1) System was designed so that captured solids and floatables are conveyed to Blue Plains for treatment.

4.3 Anacostia River Floating Debris Removal Program

This program was initiated in October 1992 to remove floating debris from Anacostia and Potomac Rivers on a routine basis. The program has continued from that time and is now under the auspices of DC WATER, Department of Sewer Operations. The floating debris removal program utilizes a skimmer boat and support boats to remove floatable debris from the Rivers as well as trash, which accumulates on the riverbanks and in the mud flats at low tides. Work for the most part is directed toward the Anacostia River. The boats pick up debris five days a week. Operations are summarized as follows:

Table 4-3 Anacostia River Floating Debris Removal Program – Summary

Program Operation	5-day work week, excluding holidays, weather permitting
Work Days this month:	20
Days not Operating	5
Reason not Operating	Maintenance, wind, low water levels.
# Skimmer in Fleet	3 Skimmers
# Skimmers Out of Service	None
Dates	N/A
Reason	N/A
Plan to Restore to Service	N/A
Amount Material Collected	15 tons this month. Calendar year to date 140 tons.
Nature of Material	Bottles, cans, natural debris and plastics.

4.4 CSS Litter Control

This section describes DC WATER's efforts to coordinate litter control efforts with the National Park Service and D.C. Department of Public Works to maximize litter control efforts in the combined sewer system.

No Activity this month.

5. MONITORING

5.1 Condition Report Bar Racks at Main and O Street Storm Pumps

DC Water performs visual surveys of the bar racks at Main and O Street Pumping Stations to characterize the quantity and nature of floatable discharge. The physical condition of the bar racks and any maintenance requirements are also noted.

Table 5-1
Bar Racks at Main & O Street Pumping Stations

	Date	Condition		Work Order		Work Performed or
Pumping Station	Inspected	Good	Needs Work	Number	Work Needed	Schedule for Completion

Monthly Operations Report for Combined Sewer System Month: June 2021 Table of Contents

1. INTRODUCTION

2. OPERATION AND MAINTENANCE

- 2.1 Regulators
- 2.2 Outfalls, Tide Gates and CSO Signs
- 2.3 Pumping Stations
- 2.4 Inflatable Dams and SCADA Systems

3. DRY WEATHER OVERFLOWS

4. SOLIDS AND FLOATABLES CONTROL

- 4.1 Catch Basin Cleaning
- 4.2 BMP Demonstration for Solid and Floatable Control
- 4.3 Anacostia River Floating Debris Removal Program
- 4.4 CSS Litter Control

5. MONITORING

- 5.1 Bar Racks at Main & O Street
- 5.2 Rainfall Data
- 5.3 Wet Weather Overflows

1. INTRODUCTION

The District of Columbia Water and Sewer Authority (DC Water) operates a wastewater collection system comprised of separate and combined sewers. Separate storm and sanitary sewers serve two-thirds of the District. In the combined sewer system (CSS), there is a single sewer to convey storm water and sanitary wastes. The area served by combined sewers comprises about one-third of the District.

During dry weather, sanitary wastes collected in the CSS are conveyed to the DC Water's advanced wastewater treatment plant at Blue Plains (BPAWWTP or the Blue Plains AWWTP). During periods of rainfall, the capacity of a combined sewer may be exceeded and the excess flow, which is a mixture of storm water and sanitary wastes, is discharged directly to the Anacostia River, Rock Creek or the Potomac River or their tributary waters. This report summarizes the operations of the combined sewer system for the month indicated.

2. OPERATION AND MAINTENANCE

2.1 Regulators

Regulators divert combined sewage to interceptors, which convey flow to BPAWWTP for treatment. When flows exceed the capacities of the systems such as during significant rain events, regulators divert excess flow to the tunnel system for temporary storage, and CSO outfalls which discharge to receiving waters. The following table summarizes inspections of CSO regulators in the collection system.

Table 2-1 Regulator Structures

1. Outfall no longer functions as a combined sewer outfall.

2.3.1 Pumping Stations

Pumping station operations are summarized in the table below.

Table 2-3
Pumping Stations – Inspections and Equipment in Service

Pumping	No. of	No.	No.	Screens or Pumps			Work Order	
Station	Inspections	Screens	Pumps	Out of Service	Dates	Reason	Number	Schedule to Restore to Service
Main	30	3	4	None	_	-	_	-
Eastside	1	2	4	None	-	-	-	-
Poplar Point	1	2	4	None	-	-	-	-
Potomac ^{1,2}	30	4	5	Screen #1	6/01/21 – 6/12/21	Bent rake and scraper bar, screen is off track.		Returned to service 6/12/21. The screen was repaired.
				Pump #4	6/11/21 – 6/12/21	Pump shut down due to high vibration.		Returned to service 6/12/21 after the vibration analysis technician conducted an inspection and ran tests.

^{1.} While Screen #1 was out of service during the month of June 2021, firm pumping capacity was maintained for the majority of the month by keeping the screening channel open to allow flow through to the pumps during wet weather events. Debris was manually removed as needed. The screening channel was closed for a portion of time while Screen #1 was rebuilt, commissioned, and returned to service on 6/12/21.

^{2.} Please reference letter dated June 17, 2021, to the USEPA Region III for Pump #4 vibration issues.

Table 2-4
Pumping Stations – Preventive Maintenance

		Tumping Stations Treventry		
	Date		Work Order	
Pumping Station	Performed	Type of Preventive Maintenance Performed 1,2	Number	Comments
Main	6/6/21	Group A	21-393015	Add oil, grease bearings and replace packing if needed.
O St	6/13/21	Group A	21-413140	Add oil, grease bearings and replace packing if needed.
Eastside	6/7/21	Group A	21-346048	Add oil, grease bearings and replace packing if needed.
Poplar Point	6/8/21	Group A	21-396655	Add oil, grease bearings and replace packing if needed.
Potomac	6/9/21	Group A	21-351553	Add oil, grease bearings and replace packing if needed.
Rock Creek	6/1/21	Group A	21-374925	Add oil, grease bearings and replace packing if needed.
Upper Anacostia	6/1/21	Group A	21-396728	Add oil, grease bearings and replace packing if needed.
Earl Place	6/2/21	Group A	21-369634	Add oil, grease bearings and replace packing if needed.
1st Street Tunnel Dewatering	6/23/21	Group B	21-419661	

- 1. Group A consists of:
 - a. Exercise bar screens
 - b. Exercise all sump pumps
 - c. Drain condensation from air compressor storage tank
 - d. Check depth of screening in the screen room and schedule Vactor truck as required
 - e. Check all safety equipment
 - f. Issue work order requests as required
- 2. Group B consists of:
 - a. Inspect and manually run CSO Pumps
 - b. Generator:
 - i. Inspection operation and test, inspect oil level, inspect coolant level
 - c. MCC:
 - i. Test gas monitoring system
 - ii. Inspect and test level indicators
 - d. Valve Vault
 - i. Lubricate knife gate valve stem and stem nut
 - ii. Flush air and vacuum release valve

				6/15/21	0.56		
				6/21/21	0.09		
				6/23/21	0.02		

- 1. Screenings collected from the Main and O Street Pumping Stations are combined from the sanitary flow and combined sewer overflows, due to the design of the screening system that consists of vertical trash racks, with no mechanical cleaning. Therefore, quantification of captured screening materials, specifically from combined sewer overflows, is not feasible.
- 2. Flow meters have been installed in accordance with NPDES Permit No. DC002199 to record CSO discharges from Main and O Street Pumping Stations. This data is reported via Discharge Monitoring Reports submitted to the EPA on a monthly basis. A summary of metered and modeled CSO discharges is included in Section 5.

2.4 Inflatable Dams and SCADA System

DC Water operates and maintains nine inflatable dams at seven different locations. Table 2-6 summarizes the date(s) the inflatable dams were inspected, and their operational status and condition. The inflatable dams consist of multi-ply elastomeric (i.e., "rubber") fabric dams installed in major overflow conduits within the combined sewer system. The objective of the inflatable dam installation is to increase the effective depth to which the sewage must rise in the combined sewer before overflows occur. The effect of the installation is to retain a greater volume of combined sewage flow resulting from low to moderate intensity storms by maximizing storage within the CSS. During higher intensity storms, when the full carrying capacity of the overflow conduit is required to prevent upstream flooding, the dam is deflated automatically. Inflatable dam operations are summarized below:

Table 2-6
Inflatable Dams – Inspections and Equipment in Service

Inflatable Dam		Was Dam Out of Service			
Structure No	Date Inspected	During the Month?	Dates out of Service	Reason	Schedule to Restore to Service
14 - East	6/28/21	No	N/A	N/A	N/A
14 - West	6/28/21	No	N/A	N/A	N/A
15	6/28/21	No	N/A	N/A	N/A
15A	6/28/21	No	N/A	N/A	N/A
16 – East	6/30/21	Yes	6/1/21	Note 1	6/8/21
16 – West	6/30/21	Yes	6/1/21	Note 1	6/8/21
34	6/28/21	Yes	6/15/21	Note 2	6/16/21
35	6/28/21	Yes	6/23/21	Note 3	6/23/21
52	6/28/21	No	N/A	N/A	N/A

- 1. On 6/1/21, Structures 16 (E and W) deflated due to a high level reading on the level sensor. Instrumentation personnel investigated the structure and noticed condensation on the level sensor. The level sensor was cleaned, the signal was stabilized, and the structure was returned to service in less than 24 hours. This was not an overflow to the river as the upstream levels were significantly lower than the low-level threshold.
- 2. On 6/15/21 and 6/16/21, Structure 34 experienced a PLC loss of communication which resulted in a deflation. Instrumentation personnel were dispatched to the site to investigate, and communications were restored. This was not an overflow to the river as the upstream levels were significantly lower than the low-level threshold.
- 3. On 6/23/21, Structure 35 was manually deflated for investigation and equipment repair of the downstream level and flow instruments. This was not an overflow to the river as the upstream levels were significantly lower than the low-level threshold.

Table 2-7
Inflatable Dams & SCADA Sites - Wet Weather Operations

^{1.} The number of catch basins in our service area changes with the ongoing connections and abandonments to the sewer infrastructure.

^{2.} These are estimated counts from sewer maps until the existing Sewer Mobile APP for field data is updated and reprogrammed for use.

4.2 BMP Demonstration for Solid and Floatable Control

DC WATER operates the following demonstration projects designed to remove solids and floatables from CSO prior to discharge.

• Bar Rack at CSO 040 and 041 to Rock Creek

Table 4-2 BMP Demonstration Projects – Report

Facility	Date Inspected	Condition	Work Needed	Work performed	Material Removed (LB)
Bar Rack CSO 040	06/01/21	Good	None	Routine Cleaning	(1)
Bar Rack CSO 041	06/17/21	Good	None	Routine Cleaning	(1)

Notes:

(1) System was designed so that captured solids and floatables are conveyed to Blue Plains for treatment.

4.3 Anacostia River Floating Debris Removal Program

This program was initiated in October 1992 to remove floating debris from Anacostia and Potomac Rivers on a routine basis. The program has continued from that time and is now under the auspices of DC WATER, Department of Sewer Operations. The floating debris removal program utilizes a skimmer boat and support boats to remove floatable debris from the Rivers as well as trash, which accumulates on the riverbanks and in the mud flats at low tides. Work for the most part is directed toward the Anacostia River. The boats pick up debris five days a week. Operations are summarized as follows:

Table 4-3 Anacostia River Floating Debris Removal Program – Summary

Program Operation	5-day work week, excluding holidays, weather permitting
Work Days this month:	21
Days not Operating	1
Reason not Operating	Maintenance, wind, low water levels.
# Skimmer in Fleet	3 Skimmers
# Skimmers Out of Service	None
Dates	N/A
Reason	N/A
Plan to Restore to Service	N/A
Amount Material Collected	10 tons this month. Calendar year to date 150 tons.
Nature of Material	Bottles, cans, natural debris and plastics.

4.4 CSS Litter Control

This section describes DC WATER's efforts to coordinate litter control efforts with the National Park Service and D.C. Department of Public Works to maximize litter control efforts in the combined sewer system.

No Activity this month.

5. MONITORING

5.1 Condition Report Bar Racks at Main and O Street Storm Pumps

DC Water performs visual surveys of the bar racks at Main and O Street Pumping Stations to characterize the quantity and nature of floatable discharge. The physical condition of the bar racks and any maintenance requirements are also noted.

Table 5-1
Bar Racks at Main & O Street Pumping Stations

Date		Condition		Work Order		Work Performed or
Pumping Station	Inspected	Good	Needs Work	Number	Work Needed	Schedule for Completion
Bar Racks at O						
Street Storm	6/28/21	X		21-431982		
Pumps (CSO 010)						
Bar Racks at Main						
Storm Pumps	6/28/21	X		21-431975		
(CSO 011)						

5.2 Rain da	Rain Data ata from National Airport and	I from the rain gauges inst	called in the CSS are sum	marized below.
