

Attachment 2

Other Addition Non-Regulated Monitoring Data

Customer Service Samples

DC Water operates a program where customers request a lead sampling kit on an annual basis. The kit comes with bottles and instructions on how to take first and second draw samples. Customers collect their own samples and contact DC Water to deliver the bottles to the Washington Aqueduct. Results are then reported back to the customer through DC Water's Customer Service Program.

Customers from multi-family or commercial properties that cannot coordinate the six hour stagnation period are given a filter kit with two 250 milliliter bottles and instructed to fill the second bottle immediately after the first bottle. The Customer Program Code for these samples is "DS250".
